newing the attack as they had intended and this ended the battle of the Yser except for a few somewhat desultory efforts on either side. The battle had cost the Belgians some 18,000 and the French some 5,000 casualties.

*The German Attack.*—Meantime Von Fabeck, after some preliminary attacks on the 29th, made his principal effort. On Oct. 30 the XV. Corps fell upon the weary 7th Div. and drove it back from Zandvoorde, while the II. Bavarian Corps pushed the British cavalry back through Hollebeke and Oostaverne. There appeared to be real danger that the roads through Ypres behind the British and French troops east of the town would be cut. Foch at once promised reinforcements for the Hollebeke front. The French 32nd Div. went to the help of the British cavalry at Oostaverne and five French battalions under Moussy came up to support the left of the 7th Div. at Klein Zillebeke and St. Eloi. Ere the effect of these reinforcements could be felt a crisis had developed on the Menin road. On Oct. 31, the German XV. Corps and 54th Res. Div. attacking on either side of the road, had captured Gheluvelt and broken the line between the 1st and 7th Divisions. For a time it appeared that retreat was inevitable but a gallant counter-attack organised by Brig-Gen. FitzClarence and delivered by the 2nd Bn. Worcestershire Reg. against Gheluvelt from the north drove the Germans out of the village. Later in the day this success was confirmed by another counter-attack on a larger scale organised and directed by Maj-Gen. Bulfin. Thus the situation was with difficulty restored. But if Von Fabeck's right was checked his left and centre were not done with. On Nov. 1 and 2 he renewed his efforts against the British cavalry and captured Messines and Wytshaete and the whole of the Messines ridge, but his further progress was stopped by the timely arrival of French reinforcements, and on this portion of the battle front the Allied line was established east of the village of Kemmel and of the important Mount Kemmel.

*German Guard Attack: Nov. 11.*—Another lull ensued and the battle of Ypres appeared to have come to an end. The Indian Corps had relieved the infantry of the II. Corps on the La Bassée-Neuve Chapelle front and the greater part of that infantry had gone up to Ypres and taken over the trenches of the 7th Div. which had left only 4,149 of the 12,522 infantry landed at Zeebrugge a month before. These changes were made without further interference from the enemy than constant shelling, but the Germans had yet another great effort in preparation. Six more divisions, including a division of the German Guard, were collected for a final effort to break through to Ypres. In preparation for this attack Duke Albrecht was directed to keep up the utmost pressure and this resulted in a series of local attacks chiefly against the French, in one of which, on Nov. 10, the gallant defenders of Dixmude were at length driven out of the ruins of that place.

On the next day the attack, commonly called the German Guard attack, was made after an intense bombardment on the front from the Messines ridge to the north of the Ypres-Menin road. The German Guard attacking astride the Menin road gained the only success of importance won by the Germans on Nov. 11. The Guard broke through the left of the 1st Div. and penetrated into the Nonne wood, but again the situation was restored by two counter-attacks, the first delivered by the Royal Scots Fusiliers near the Menin road, the second by the 2nd Oxford and Bucks Light Infantry driving the Germans out of the Nonne wood. In preparing the latter attack Gen. FitzClarence was killed. Further south the German XV. Corps secured Hill 60 near Verbranden-Molen, a small rise destined to be a bone of contention during the early months of 1915, but elsewhere the attack made no progress.

*Closing Stages.*—The failure of this last attack by the Germans to break through practically closed the battle, though Duke Albrecht made on Nov. 17 an attack on the Herentage Wood which met with no success. Thereafter the Germans decided to adopt a defensive attitude in the West and to send all available troops against Russia. On Nov. 21 the British troops were relieved by the French, the infantry of the II. Corps being

returned to its commander, who took over the front opposite the Messines ridge, while the I. Corps went into reserve for a short rest. From Oct. 14 to Nov 17 the battle had been almost continuous from the La Bassée canal to the Yser and on that front during that period the British losses had amounted to 54,106 killed, wounded, and missing.

(F. B. M.)

**YPRES, SECOND BATTLE OF.**—Early in April 1915 the British front was extended some five m. to include the Ypres salient, so that by the 17th the left of the V. Corps (Plumer) rested on the Ypres-Poelcappelle road.

*Situation Before the Action.*—The V. Corps right joined the II. Corps (Fergusson) just north of Hill 60 on the Ypres-Comines railway, and the two corps formed the II. Army commanded by Sir Horace Smith-Dorrien. Between the British left and the Yperlee river at Steenstraat, a distance of five miles were the French 45th and 87th Divs., which with a cavalry detachment formed the "Groupeement d'Elverdinghe" commanded by Putz. The Belgian 6th Div. (de Ceuninck) then held the canal to Drie Grachten, with the remainder of the Belgian Army extending through the flooded area to join another group of Foch's command between it and the sea at Nieuport. On the German side lay the IV. Army with the XXIII. Res. Corps opposite the Belgians and adjoining the XXVI. Res. Corps, whose left was marked by the Ypres-Poelcappelle road; facing the point of the salient were the 2nd Ersatz and 38th Landwehr Bdes. with the XXVII. Res. Corps and the XV. Corps on the south.

On April 14 reliable and detailed information was received at British and French Headquarters that the Germans intended to use a new weapon: to discharge asphyxiating gas from cylinders installed in the trenches opposite Langemarck and southwards beyond the Ypres-Poelcappelle road. Two German corps would follow through the gap made by the gas cloud. The offensive would begin on the night April 15-6 or with the next favourable wind thereafter. The intention, as is now known, was to cloak the transportation of divisions to Russia for a new drive in Galicia, and to shorten the line by reducing the salient at Ypres. The first move would secure a bridgehead across the canal on the north; successive attacks in echelon to the south would roll the British line back to the west of Ypres; thus the threat of combined operations by sea and land along the Flemish coast would be dispelled, and the stage set for a thrust towards the Channel ports. The warning was timely; formations in the salient were cautioned to expect an attack, but the intended use of gas was not communicated to the troops. The days passed without any noticeable augmentation of the German forces, already concentrated unseen in Houthulst Forest. The unusual noise of traffic behind the enemy's lines caused so little alarm that three of the eight Canadian field batteries in action were caught in the act of carrying out reliefs.

Beginning on the 19th, the preparatory bombardment of Ypres and Elverdinghe by heavy guns, including a 17-in. howitzer, and an increase of gas shelling in the forward area, were ominous signs of the coming battle. The extension of the British front was effected without incident, but to the south the Germans on April 14 fired a mine at St. Eloi; three days later the British blew up most of Hill 60 and the 5th Div. on the II. Corps front attacked and captured what remained. These and consequent activities diverted attention from the northern face of the salient where the first German blow would strike the junctions of the British, French and Belgian forces.

*The British Positions.*—The new line taken over by the British was marked by short unconnected lengths of breastwork with little wire and no parados. There were no trenches for supports, and ditches served for communication; a few localities had been fortified with breastworks similar to those of the front line and

affording as little protection; but 5,000 yd. behind the British line and running from Zillebeke to east of Wieltje, then turning northwest, was a second position consisting of a continuous belt of wire covering a series of strong points, each capable of holding 50 men and sometimes linked by trenches. This was known as the G.H.Q. 2nd line.

On completion of the readjustment on April 17 the V. Corps held an arc of 8½ m. with a five-mile radius. Of this the 27th Div. occupied the right, the 28th Div. the centre and the Canadian Div. the left. On April 21 the dispositions of the Canadian Div. were: from right to left the 2nd Canadian Infantry Bde. the 5th Bn. from south of the Gravenstafel road to the Stroombeek; the 8th Bn. north of the stream and along the valley for 1,000 yd., two companies from each being in support and reserve on and behind the Gravenstafel ridge; the 7th Bn. was in brigade reserve between Wieltje and Fortuin, the 10th in divisional

pelle. The effect of the gas was greater than the German infantry had anticipated; by nightfall the XXIII. Res. Corps, inclining to the right, had reached the canal and crossed at Het Sas and Steenstraete, the XXVI. had penetrated 2,000 yd. south of Pilkem, and swinging to the left was close to St. Julien. By 8 P.M. there were no formed bodies of French troops east of the canal, all their batteries in that sector had been captured, and the Canadian flank for more than 8,000 yd. lay bare and exposed to attack. A gate to Ypres had been pushed open; the Belgian and Canadian hinges held firm, but no German troops were ready to pass through, although the 43rd Res. Div. had been concentrated near Roulers to support the attack.

At the first alarm the St. Julien garrison manned the half-made trenches north of the village, and the two brigades in line ordered their reserve battalions up to the left flank, the 7th to Locality C (a few trenches near the houses along the Keerselaar-Zonnebeke road crowning the Gravenstafel ridge), the 14th to the G.H.Q. line at Mouse Trap farm, 1,000 yd. north of Wieltje. The left company of the latter pushed on until at Hampshire farm, 700 yd. farther west, they found about 200 French, with a machine-gun, occupying elements of a trench and in touch with the enemy.

Conditions at the left of the Canadian front were precarious from the first, but some 200 of the Algerians, although gassed, took up a position near and parallel to the Ypres-Poelcappelle road and, reinforced by two platoons and a machine-gun from the 13th Bn., formed a short but effective flank. Between there and St. Julien the two supporting platoons of that battalion were exterminated in countering the move to penetrate behind the trench line and roll it up; the 10th Canadian Field Bty., by switching fire to the left rear, stopped the enemy at 200 yd. before moving to a less exposed position.

**British Counter-Attack.**—Meanwhile, the 10th and 16th Bns. had been placed at the disposal of the 3rd Canadian Infantry Bde. for a counter-attack to capture the Bois des Cuisiniers, an oak wood of 160 ac. lying 1,000 yd. west of St. Julien. The 10th moved up from the G.H.Q. trenches occupied when the attack began, and was joined near Mouse Trap farm by the 16th. Shortly before midnight the battalions formed up in eight ranks on a two-company front, the 10th leading, and the advance began. At first hedges and ditches made it difficult to keep order in the darkness. Three hundred yards from the German trench covering the wood on the south the movement was detected, flares soared upwards, rapid fire flickered from the parapet, and the two battalions charged. Sweeping over the trench they pressed on through the wood, recovering the four guns of the 2nd London Heavy Bty., but, losing direction, they inclined to the right and emerged to dig in along a hedge northeast of the wood. Thus far the counter-attack had been a remarkable success, but machine-guns placed near the southwest corner of the wood still commanded the southern approaches; the nearest troops on the right were about St. Julien, and the 14th were equally distant on the left; so before daylight the line was withdrawn to the captured trench south and east of the wood. The 16th extended towards St. Julien and dug in; the 10th held the left and patrolled the wood.

The case of the defenders at the point of the new salient was becoming hourly more serious. Between the short refused flank and St. Julien, a distance of over a mile, was a gap through which the Germans had crossed the road, and a machine-gun swept the unprotected rear of the old front line. A withdrawal of 250 yd. by the left company of the 13th was cancelled after midnight on the arrival of reinforcements laden with ammunition. The old front line and the flank along the road were held in the hope that a counter-attack would restore the left. Soon after 3 A.M. conditions were further improved by the 7th Bn. (less one company) moving westwards along the ridge to dig a north and south line some 700 yd. long, the left in touch with the St. Julien garrison, the right bent back and in the air east of Keerselaar.

Other troops in the vicinity when the battle opened were the 2nd East Kent, 3rd Middlesex and 5th King's Own all in bivouac about St. Jean as 28th Div. Reserve. Of these, B Company of

reserve between St. Jean and Ypres. On the left the 3rd Canadian Infantry Bde. also held the line with two battalions: the 15th and 13th each with three companies in the trenches, and two platoons in support; the remaining two companies, with one of the 14th, were posted in St. Julien as a garrison. The 14th (less one company) was in brigade reserve at St. Jean; the 16th, along the canal north of Ypres, was in divisional reserve. The 1st Canadian Infantry Bde. lay at Vlamertinghe in II. Army reserve and had been under orders to be ready in case assistance should be required at Hill 60.

**German Gas Attack.**—At 5 P.M. on April 22 a heavy greenish yellow smoke rose from the German trenches opposite Langemarck and rolled southwestwards in a sullen penetrating cloud on the gentle breeze of that sunny afternoon. Soon native French troops were seen staggering back through the storm of high explosive and gas shells, past the Canadian batteries and reserve infantry battalions already standing to arms. It was clear that the line on the left had broken, but the extent of the disaster was not realised at first. Actually the German XXIII. and XXVI. Res. Corps., after a short artillery preparation, had attacked under cover of a discharge of 180,000 kgr. of chlorine gas, the former with the 46th Res. Div. to secure the line Pilkem-Boesinghe, the latter with the 52nd and 51st Res. Divs. to capture the ridge marked by the road from Pilkem to Poelcap-

the East Kent was detached, two companies of the Middlesex moved after dark to guard the canal bridge east of Brielen; the remainder with the 1st York and Lancaster from south of Brielen were placed as a detachment under the Canadian Div., and commanded by Col. Geddes of the East Kent. His instructions were to advance and occupy the gap between the Canadian left near Mouse Trap farm and the French, behind whose right the 2nd East York from 28th Div. Res. had arrived before midnight at Brielen. Daybreak found the 9th Royal Scots, 2nd Duke of Cornwall's Light Infantry and 4th Rifle Brigade, from 27th Div. Res. west of Ypres, already east of St. Jean and the first two added to Geddes' detachment.

*Consolidation of the British Line.*—As soon as news came back of the breaking of the line on the left, the 1st Canadian Infantry Bde. at Vlamertinghe had been released from Army reserve and returned to the Canadian Division. The 2nd and 3rd Bns. were sent to the 3rd Canadian Infantry Bde. to strengthen the line between St. Julien and Bois des Cuisiniers. They arrived at Trap farm at 1:30 A.M. The 1st Bde. was first sent to the canal bank at the bridge east of Brielen, and then ordered to cross and attack along the Ypres-Pilckem road at 5:30 A.M. In conjunction with the advance of Geddes' detachment on the right and a projected French attack on the left. This latter attack had been ordered by Foch at midnight to regain the ground lost, and the French 153rd. Div. was being brought up, but it took some time to gather fresh troops and three Belgian battalions were lent for the attack. The greatest handicap was lack of guns; the Canadian frontage was 300 yd. per gun.

At daybreak began the process of establishing a continuous line along the Canadian flank to join the French on the canal. Two companies of the 3rd Bn. went into the gap between St. Julien and the right of the 16th near Bois des Cuisiniers, the 2nd Bn. moved into close support of the 10th and 16th. The 2nd East Kent by 6 A.M. had worked forward to the G.H.Q. line northwest of Mouse Trap farm, and on their left found the French detachment and the company of 14th Canadians in Hampshire farm. Then there was a gap of 1,000 yd.: orders to the 5th King's Own and 1st York and Lancaster had miscarried and they did not go forward. But farther left the two companies of the 3rd Middlesex established touch with the 4th Canadian Battalion. Advancing by short rushes across the open under devastating fire, they carried that part of the line to the lower slopes of the Pilckem ridge within a short distance of the enemy's new trench. On the right the Middlesex captured Turco farm (3,200 yd. from Ypres) but the survivors were too few to hold it and the line came to a standstill immediately south of the farm, with the Canadian left, now strengthened by the 1st Bn., bent slightly back to form a flank, as the French attack had not materialised.

To take the place of the V. Corps Res., the 13th Bde. of the 5th Div. moved late on April 22 from the II. Corps Res. to west of Ypres. The British Cav. Corps also, from G.H.Q. Res., was brought to Poperinghe on April 23 and the 1st Cav. Div. was sent at 11:40 A.M. towards Elverdinghe-Woesten to clear up the situation on the canal. At 5:15 P.M. the whole Cav. Corps became the mobile reserve of II. Army. The 50th Div. in G.H.Q. Res. just put from England was warned to be ready to move. But there were not sufficient French reserves available to recover the lost ground and a further thrust across the canal was to be expected, so the 13th Bde. at 10:30 A.M. was given to the Canadian Div. and ordered to counter-attack northwards along the east of the canal towards Pilckem. This attack began at 5 P.M. and the right advanced to the thin line of the 1st Canadian Bde.; the left, assisted by the French, came up abreast and extended to the canal. Simultaneously a second advance moved down the open slopes towards the German trenches on the opposite ridge. Two field batteries only were available in support, and casualties were so heavy that little ground was gained in the face of the 240th Res. Regt. which, aided by the 37th Landwehr Bde. entrenching along the Pilckem ridge, filled the gap caused by the divergent attacks of the XXIII. and XXVI. Res. Corps.

*Positions after the Action.*—The position of the line at night-fall on April 23 was little different from that of the morning; the

German move to widen the breach had failed; an attempt to cross the canal in front of the Belgians met with no success and the refused flank of the 6th Div. still held; opposite the French the ground captured west of the canal had been slightly increased in spite of the efforts of the 87th Div. reserves and fresh troops brought down from Nieupoort, but the objective for the day had not been reached and Lizerne was not taken until midnight. On the British front the counter-attacks of the morning had made it possible to build up the long exposed flank, and, but for a gap of 1,000 yd. along the Ypres-Poelcappelle road north of St. Julien a line of defence now existed from the original Canadian left to the canal. But the situation of the troops in the salient was desperate; if the French could not recover the ground on the left an extensive retirement would be necessary, and converging attacks might break down the apex before a withdrawal could be completed.

*BIBLIOGRAPHY.*—Viscount French, *Despatches, April 1914–July 1916* (1917); H. E. R. Steele, *The Canadians in France, 1915–8* (1920). (See also *WORLD WAR: BIBLIOGRAPHY.*) (A. F. D.)

**YPRES, THIRD BATTLE OF.**—Almost continuous fighting took place in the Ypres-Yser region during many weeks in summer and autumn of 1917, but the operations as a whole may be said to have consisted of two distinct phases. First came the brilliantly successful combat, lasting a few hours, which has come to be known as the battle of Messines. Then, after a lull, there came to be launched immediately north of the scene of the Messines victory a series of attacks, at short intervals which gained ground by successive waves and which lasted four months.

*British Objectives.*—The object in view throughout was the occupation of the whole of the belt of high ground which extends from a point about three m. north of Armentières to near Dixmude. It rises some 100 to 150 ft. above the great Flanders plain, and reaches a height of over 200 ft. at some points. In the spring of 1917 its southern portion enclosed to a great extent the Ypres salient, although the Allies' trenches gave them possession of the lower slopes of their side of the high ground. Farther to the north the enemy held the whole of the high ground, as well as some stretches actually to the west of this. The Allies' general plan of operations was to begin at the southern end and to work thence northwards. But the capture of the high ground, it should be noted, only represented the first part of a strategical plan which contemplated a subsequent effort that was to be carried out in the coast district by fresh forces.

*Positions of the Adversaries.*—The line held by the Allies to the north of Armentières, at the outset, formed in plan an inverted "S," with the lower loop turned to the west, the upper loop turned to the east, and creating the Ypres salient. The lower loop, on the other hand, represented a pronounced enemy salient jutting into territory in Allied hands and consisting almost entirely of high ground known as the Messines-Wytschaete ridge. From this position the Germans enfiladed and even took in reverse Allies' trenches along the east and the north of the salient, and they commanded the communications leading up to these trenches from the rear, while they also overlooked the town of Ypres within field-gun range; so Haig framed his plans for the Flanders offensive so as to capture the high ground about Messines and Wytschaete in the first place.

#### THE FIRST STAGE

General Plumer and his II. Army, who had been acting as wardens of the Ypres front for two years, had been selected to carry out this operation, while the V. Army under General Gough had been transferred from Artois to hold the line north of the II. Army. Preparations for the undertaking had been going on during the winter and spring; they included an elaborate railway scheme, much road construction, and arrangements for deep mining on a colossal scale. Twenty huge mines had been established at the end of galleries running right under the enemy's front line of trenches, and 600 tons of explosives had been distributed among them.

For the defence of this salient which they occupied the Germans depended on two separate sets of lines, coinciding in trace

with its arc, the more advanced one pushed down the forward slope of the high ground while the rear one followed its crest; the enemy had also constructed two chord positions, stretching along the base of the salient on the reverse slope. The troops of the II. Army detailed for the enterprise were, enumerating from right to left, the II. Anzac Corps, with the Australian 4th Div. in support, the IX. Corps with the 11th Div. in support, and the X. Corps with the 24th Div. in support. There were thus nine divisions in front line and three in support. As the final objective

on to the heights to assist in the capture of the German chord lines of trenches, and this closing effort, which was made later in the afternoon, proved completely successful. So it came about that by the evening the last objectives had been attained. The total casualties incurred by the assailants amounted to only about 16,000, while 7,200 prisoners, 67 guns, 94 trench mortars and 294 machine-guns had been taken from the enemy.

*A Period of Quiet.*—A pause of some weeks in active operations in Flanders now took place while preparations for carrying out the rest of Haig's programme were being completed. Although Plumer's victory of June 7 had put an end to the enemy overlooking Ypres from the south, the Germans still, in a measure, dominated the place from the east, from the northeast and from the north, a fact which exercised an important influence over the arrangements in progress for the offensive about to be undertaken. The preparations could not be concealed and the Germans knew that they were being made. The plan at the outset was that, while the II. Army stood fast, the V. Army under General Gough on its left with the French I. Army still further to the left, should attack the enemy line along their front extending from near Hooze to some distance north of Steenstraet on the Yser canal.

It should be noted that the valley of the little river Steenbeke proved of considerable tactical importance during the operations that followed, for it created a marked depression in the high ground of which Gough was to gain possession. Between the depression and the V. Army lay the low Pilckem Ridge—its first objective—and after that ridge was taken any further advance towards the main ridge involved crossing the depression. Another point to note is that, whereas the line occupied at the outset by the V. Army and the French I. Army ran from southeast to northwest, the main line of heights which formed the ultimate objective ran from south to north, so that the assailants would in due course be called upon to make a half-wheel to the right, pivoting on that section of the high ground which was situated about east of Ypres. The troops forming the outer (left) flank in the wheel would moreover be called upon to traverse some miles of low, marshy ground before they began to ascend.

Aware since early spring that the Allies contemplated offensive operations in this region, the Germans had taken steps to meet the eventuality with characteristic thoroughness and ingenuity. Having learnt by experience that a continuous system of trenches did not proffer a wholly satisfactory form of defence unless there was abundant underground cover, and realising that the waterlogged character of the soil of Flanders militated against the creation of subterranean galleries, they had established a system of numerous disconnected trenches and strong points, arranged in depth rather than in breadth, together with numbers of concrete blockhouses armed with machine-guns. As their front line near Ypres had been in existence since 1915, they trusted to the old system to meet the first shock of attack, and it was rather in the later offensive operations that the Allies found themselves confronted with these new defensive devices.

#### THE SECOND STAGE

The offensive was to have started on July 25 but it was for various reasons deferred until the 31st. During that period the enemy retired out of his foremost trenches along the canal between Boesinghe and Steenstraet, which enabled the British and French troops on the left to throw bridges, and facilitated their task when they delivered their attack. This first day proved very favourable to the Allies, who reached the line of the Steenbeke, after capturing the Pilckem Ridge. Bixschoote and St. Julien were taken, and only on the extreme right about the Menin road did the assailants fail to gain their objectives. Over 6,000 prisoners were taken, together with 25 guns, and as a result of the fighting Ypres was no longer overlooked from the northeast and north.

But the weather broke that day, and in consequence of the continuous rain in the early days of August the offensive could not be resumed until the 16th of that month. On this day the Allies were successful along the left half of the battle front, pass-

of the assailants was the chord of the arc forming the salient, the time-table took account of the greater distance which some divisions had to traverse than others.

*The First Attack.*—The moment of assault was fixed for 3:10 A.M. on June 7, and at that hour the line of mines exploded beneath the enemy's front line with devastating effect. At many points the hostile trenches were completely obliterated and their garrisons wiped out, so that at first very little resistance was offered to the assailants and the first objective was secured almost at once. The infantry then proceeded to the execution of their next task, that of carrying the German second line, and here again they were completely successful. Messines was taken by the New Zealanders, Wytschaete fell to the 36th (Ulster) and 16th (Irish) Divs., fighting side by side, while on the left the 47th (London) Div. overcame most formidable obstacles and took many prisoners.

So rapid indeed were the movements of the attacking infantry in these opening phases of the combat, that the tanks in many cases were unable to get up in time to share in the struggle for the enemy's second line of defence; by early afternoon all the upper part of the Messines-Wytschaete ridge was in the hands of the British and Australian troops. Guns were promptly pushed up

ing the Steenbeke and capturing Langemarck; but little progress was made along the right half of the battle front, which represented the more important section. Although 2,000 prisoners and 30 guns were captured, little improvement had been effected as a result of a fortnight's operations about the crest of the ridge immediately north of the ground that had been won on June 7. Up there, the line had only been advanced a very few hundred yards as a result of two regularly prepared attacks. Haig therefore decided to extend the left of the II. Army northwards and to entrust the attacks against this higher ground to Plumer, who was to work in conjunction with the V. Army operating farther to the left. The weather, however, continued most unfavourable, and it was not until Sept. 20 that the next attack was delivered.

Very important results were, however, achieved on this occasion, for the efforts of the II. Army were crowned with brilliant success in a sector where previous attempts had to a great extent failed. The crest of the main ridge on either side of the Ypres-Menin road was wrested from the enemy and a footing was gained close to Gheluvelt and in Polygone Wood. The V. Army likewise gained ground farther to the left, and over 3,000 prisoners and many guns were captured. This victory was followed up by a fresh attack on the 26th, when the British position was improved almost all along the line and particularly about Polygone Wood, while another 1,600 prisoners were secured.

The combats of Sept. 20 and 26 having given almost the entire crest of the main ridge east of Ypres to the British, to a depth of  $1\frac{1}{2}$  m. from the positions that had been occupied on July 31, Haig arranged for a very important operation to take place on Oct. 4, the front this time extending from Polygone Wood to the Ypres-Staden railway, although a minor advance was also to take place to the south of Polygone Wood. A severe gale blew on the night of the 3rd, and torrents of rain fell, so that next morning the ground in most parts of the battlefield was little better than a morass. The attacking side nevertheless gained a signal victory, securing nearly all its objectives in a few hours' fighting. Especially important were the gains made in the centre, where a position was won along the forward crest of the main ridge about the village of Broodsinde and to the south of it, while on the left a footing was gained in Poelcappelle and the V. Army secured a line clear of the lowest and most marshy part of the Steenbeke depression. Prisoners taken totalled 5,200 with a number of guns, machine-guns and trench mortars, and this highly satisfactory achievement had moreover been accomplished without very heavy sacrifice.

#### THE FINAL OPERATIONS

As a result of the operations begun on June 7 the crest of the long belt of high ground overlooking the Flanders plain had now, after four months of intermittent fighting, been secured from Messines northwards to within a few hundred yards of the Ypres-Roulers railway. And yet, regarding this Flanders offensive as a whole, the work was in reality only begun. The Houthulst forest, with the long line of high ground forming the quadrant of a circle beyond it, was still in the enemy's hands. Until the ridge had been secured to the vicinity of Staden it would be premature to embark upon the second part of the general scheme of operations—an attack on the German positions along the coast between Nieuport and Ostend, for which the IV. Army under General Rawlinson had been assembled on the extreme left, by the sea. Winter was approaching and Haig had now to decide whether or not to continue his gradual advance northeast of Ypres.

The whole undertaking had been much delayed at the outset owing to General Nivelle's unsuccessful offensive in the Aisne country. The weather since the end of July had been deplorable, with the result that the pushing forward of heavy artillery as new positions were secured proved most difficult, and that the British tanks were terribly hampered in their movements. Had the line secured on Oct. 4 been made good two months earlier, there would still have been a quite reasonable prospect of the ridge being secured to beyond Staden several weeks before winter set in, thus allowing for the IV. Army to play its part in

the coastal region. As it was, but little likelihood remained of these Flanders operations achieving the success that had been hoped for when the plan was matured. In view of the discouragement existing at the time in the French forces it was, however, almost imperative to occupy the attention of the enemy as far as possible, and there were, moreover, grounds for hoping that the Allied position to the northeast of Ypres could still be considerably improved from the defensive point of view within the next few weeks. Haig therefore decided to continue the offensive to the north of the Ypres-Roulers railway, and with a view to this a certain readjustment of the orders of battle of the II. and V. Armies was effected.

The wet weather unfortunately continued during early Oct. but an improvement then set in which lasted till the 25th, the very day for which the fresh attack had been fixed. In spite of a down-pour of rain the troops detailed for the work on the crest of the ridge gained ground on that day right up to the outskirts of Passchendaele. During the following week the French and Belgian troops on the extreme left pushed forward successfully up to the Blankaart lake and to the outskirts of the Houthulst forest, while progress was also made at a number of other points along the line. Then, on Nov. 4 Passchendaele was captured by a sudden advance of the 1st Div. and the Canadian 2nd Div., and the victory brought the 1917 Flanders offensive at last to a close.

#### RESULTS OF THE UNDERTAKING

The situation in this position of the Western Front had been transformed by the events of the past five months. The chain of heights from north of Armentières to Passchendaele had changed hands. The Ypres salient, vastly extended, had, from constituting a weak and barely defensible sector of the Allies' front, become a serious menace to the enemy. Haig had secured a satisfactory defensive position between the Yser and the Lys, and great hostile forces had been kept fettered to the northwestern extremity of the general theatre of war, striving to maintain possession of a tract that had been captured by the invader three years before. But the main object for which the offensive had been undertaken had been only very partially attained. The German hold upon the coast district remained unshaken. The third battle of Ypres, chiefly perhaps because of unfortunate delays in starting operations and of untoward weather conditions after they had been started, had not, as had been intended, prepared the way for subsequent advance upon Ostend and the great plain north of the Lys.

(C. E. C.)

**YSER, BATTLE OF THE.**—On Oct. 10 1914 the whole of the Belgian field army encamped on the west bank of the Ghent-Terneuzen canal. The British Naval Div., which had embarked at St. Gilles-Waes, regained Dunkirk with the exception of two battalions, which were cut off, and passed into Holland; the French Fusilier Marine Bde., half of the English 7th Div. and the 4th Belgian Bde. were holding Ghent and had repulsed an attack on that city by the 1st Res. Ersatz Brigade. Information had been received that a division of Bavarian cavalry had advanced towards Deynze, passing between the Schelde and the Lys; that a column of 20,000 men had passed by Courtrai and Menin and that the German IV. Cav. Corps was holding the region Tourcoing-Ypres-Poperinghe. The only way of baffling the threat to the Belgian Army of envelopment on a large scale was an immediate march to the coast, and it was decided to transport all the forces without delay to the coastal region of Ostend-Thourout-Dixmude-Furnes, the infantry by rail, the artillery and transport by road under the protection of all the cavalry and Rawlinson's Corps.

*Plans of Opposing Commanders.*—The "race to the sea" had in the meantime caused the Western Front to extend to La Bassée. The British Army had been withdrawn from the region of the Aisne and was beginning to detrain west of Lille. Certain French divisions, taken from other sectors, were given the same

destination. It seemed to Gen. Joffre that the moment had come for bringing about the much-desired envelopment of the German right wing by a concentric offensive against Lille. The British Army, the Belgian Army and some French reinforcements would constitute, it was believed, under the high command of Gen. Foch, an *ensemble* capable of securing a decisive victory. Unfortunately, the assembling of the Allied troops by means of the Paris-Calais and Paris-Hazebrouck railways would take time. On the other hand, it was necessary to take in account that the Von Beseler Army Group would not fail to follow on the heels of the Belgians.

The mission of the Belgian Army was once again that of gaining time. The King, anxious to keep his left wing resting on the sea, and to preserve at all costs a fragment of national territory from invasion, thought best to entrench the army on the river Yser and the Ypres canal. The following orders were accordingly issued on Oct. 14 and 15: "The line of the Yser constitutes our last line of defence in Belgium and its preservation is necessary for the development of the plan of operations. This line is therefore to be held at all costs."

Events soon proved the wisdom of this decision. The British II. and III. and Cav. Corps were stopped at the Lys by the German IV., VII. and XIII. Corps; Rawlinson's Corps found Menin in the hands of the XIX. Corps. Von Beseler's troops now entered Bruges and Ostend. It was known that numerous detrainments were taking place west of Brussels and that a new German IV. Army had installed its headquarters at Ghent. In fact Falkenhayn, the new chief of the German General Staff, had anticipated the Allies' projects and, like them, considered the moment for a decisive victory to have arrived.

With four new army corps, composed entirely of volunteers, the XXII., XXIII., XXVI. and XXVII. Res. Corps, Von Beseler's group and the artillery park from the siege of Antwerp, Prince Albert of Württemberg was charged to proceed to the Yser with his right towards the sea, in order to attack in flank and in rear the Allied left, whose front the VI. Army was engaging between Arras and Armentières. Falkenhayn considered that: "The conquest of the coast was the sole means of frustrating the war of blockade which England contemplated and of retaliating through our destroyers, submarines, aeroplanes and Zeppelins. . . . If we succeeded in driving the enemy out of the Yser valley and pursuing him at the point of the sword, there, was no doubt that, having replenished our ranks and our stores, we should be in a condition to overthrow the western front."

Thus the Belgian Army, which had only just moved into position in the general Allied line, found itself in focus for a new battle. It occupied a front of 40 km., from the sea to Boesinghe, with 4½ divisions and 1½ divisions in reserve behind the centre. The cavalry division was operating with Mitry's French Cav. Corps, east of the forest of Houthulst. On the army's right a French territorial division extended as far as Ypres and Rawlinson's Corps had entrenched itself along the line Passchendaele-Gheluvelt.

*Opening of the Battle.*—The battle commenced on the 18th with an attack by Von Beseler's corps (4th Ersatz and 5th and 6th Res. Divs.) between the sea and Keyem. The Belgian outposts were only driven back after desperate fighting and the enemy did not even reach the Yser. On the morning of the 19th Ronarch's Marine Bde. and the 5th Div. debouched from Dixmude on the flank of the III. Res. Corps. Beerst and Vladsloup were retaken; but the intervention of the XXII. Corps, coming from Thourout, and the XXIII. coming from Cortemarck, checked the counter-attack. By the 20th the fighting had become general all the way from the sea to Gheluvelt between the Duke of Württemberg's 5½ divisions on the one hand and the Belgian Army, Mitry's Cav. Corps and Rawlinson's Corps on the other. After 48 hours of obstinate fighting the Belgian positions remained practically unchanged.

The attack of the 4th Ersatz Div. on Nieuport had failed, partly on account of the flanking fire from Admiral Hood's *Builla*; while that of the XXII. Corps against the bridgehead

at Dixmude had been checked by Meiser's Brigade. But in the night of the 21st–22nd the 6th Res. Div. made a surprise crossing of the Yser in the Tervaete salient and threw over 2½ battalions to the west bank. Concentrated artillery fire prevented the division from making any progress on the 22nd, but a notable counter-attack, in which four battalions of grenadiers and carabineers faced death with superb indifference, broke down completely under their machine-gun fire, owing to the exposed nature of the ground. The following night the Germans passed a second regiment into the bend without, however, extending their ground.

On the 24th, the whole of the III. Res. Corps and half of the 44th Res. Div., preceded by a bombardment from 10 heavy howitzer batteries and 150 field guns, broke through the front at St. Georges-Tervaete, only to find the Belgians deployed behind the Nieuport–Dixmude railway embankment, together with the French 42nd Div. which had arrived in the meantime.

*German Failure at Dixmude.*—Finding themselves checked in this direction, the Germans renewed their attack on Dixmude, preluding it with an intense bombardment of four hours (in which 21 and 42 cm. howitzers were employed amongst others) which left the town in ruins and in flames. At midnight the 43rd Res. Div. delivered its assault, driving its guns through the middle of—and even in advance of—its infantry, but in spite of a three-fold attempt it was completely repulsed by the 12th Belgian Regt., assisted by some French companies of marines. A new attack on the night of the 25th–26th met with the same fate.

*Opening of the Nieuport Sluices.*—The battle had been in progress for eight days. Over a total of 48,000 rifles the losses amounted to 15,000 in all ranks. Many guns had been put out of action, by excessive use of rapid fire; the munitions were nearly exhausted, the men at the end of their tether. Neither the British nor the French, both hard pressed at Bixschoote, Langemarck and Zonnebeke, were able to send reinforcements. Having no reserves, the Belgian commander decided to call in the sea to his assistance. The Nieuport sluices could, by opening a network of small canals to the ocean, put part of the battlefield under water; but the King did not wish to have recourse to this expedient until the last extremity.

On the 26th and 27th all the pioneers were set to stop up the 22 aqueducts of the Nieuport–Dixmude railway embankment so as to prevent the liberating tide from invading the Belgian positions; fortunately, the Germans—being also weary—remained relatively quiet during that time. On the 29th however, their artillery blazed forth again, and it seemed that a new attack was imminent. The sluices were therefore opened during the night. At dawn on the 30th, the three divisions of Von Beseler's corps attacked along the line of the railway, taking possession finally of Ramscapelle and Pervyse; but the drains were now overflowing; the flooded meadows soon made it impossible for the Germans to move, and forced them to a hasty retreat. The battle of the Yser was won and the left flank of the Allies definitely saved. Checked along the coast line, the Germans moved off to make their desperate assault on Ypres. The Belgian Army, in scrupulous observance of the spirit of the obligations of neutrality, had, from Aug. 4 to Oct. 31 1914, gloriously defended its honour and fulfilled all international obligations, paying the price with its blood and abandoning practically the whole of its territory. (See also YPRES, FIRST BATTLE OF; also map, p. 961.)

(R. VAN O.)

**YUAN SHIH-K'AI** (1859–1916), Chinese statesman, was born at Hsiang Cheng, a member of a family belonging to the smaller landed gentry of the province of Honan. Through the influence of relatives he entered upon the career of a military official, having failed to achieve distinction at the literary examinations. His first important post was in Korea, where, as Imperial Resident and the trusted lieutenant of the Viceroy Li Hung-chang, he strove by adroit diplomacy to preserve China's shadowy suzerainty over the Hermit Kingdom and to check the steadily in-

<sup>1</sup> Falkenhayn, *Die Wichtigsten Entschliessungen der O. H. L.*

creasing ascendancy of Japan. After the disastrous war with that country (1894-5) he held office as Judicial Commissioner, with military functions, under the Viceroy Li, in Chihli. The remarkable success which he achieved in this post, by bringing a division of troops to a standard of discipline and efficiency hitherto unknown in the Chinese army, gained for him the favourable notice of the Manchu Court.

Thenceforward, as the prestige of his foreign-drilled forces increased, he and they became important factors in the plots and intrigues around and about the Dragon Throne. In Aug. 1898, the Emperor Kuang Hsü, hoping to secure Yuan's loyal services in support of his scheme to seize and imprison the Empress Dowager, summoned him to a special audience at the Summer Palace. Reassured by his promises and by his professed sympathy for the objects of the reform edicts, His Majesty issued a decree conferring upon Yuan the rank of an expectant Vice-President of a Board, with special duties in connection with army reorganisation. The subsequent *coup d'état* by the Empress Dowager, which removed the Emperor from the throne and replaced him under severe tutelage, owed its success to Yuan's betrayal of the Emperor's confidence and to his active support of the conservative Manchu party. From the orthodox Chinese official point of view, his action was to some extent defensible, the Emperor's plot against the Empress, his aunt, being tantamount to lack of filial piety. In any case, it was justified by success and never seriously condemned by Chinese public opinion. But to the end of his unhappy career, the Emperor never forgave Yuan's treachery, and on his death-bed (Nov. 1908) bade his brother, Prince Chun, see to it that he should not go unpunished.

After the return of the Empress Dowager to the control of affairs, Yuan received the Governorship of Shantung as reward for his services. Accompanied by the pick of his troops, he entered upon that office at the end of 1899. In the summer of the following year, upon the outbreak of the Boxer rising, he distinguished himself by prompt and unhesitating firmness, in maintaining order and protecting foreigners throughout his jurisdiction. He was never under any delusions as to the futility and folly of the Empress Dowager's policy in encouraging the anti-foreign movement. After the signature of the peace protocol (Peking 1901), as the aged Li Hung-chang desired to be relieved of further duty, Yuan was appointed to act in his place as Viceroy of Chihli. At Li's death (Dec. 1901) the appointment was made substantive. Thus at the early age of 42, Yuan attained to the highest office in the gift of the Throne; at the same time he was made a Junior Guardian of the heir apparent. A month later the Yellow Jacket was conferred upon him, together with the appointments of Consulting Minister to the Government Council and Director General of the Northern railway. In the following year he became a Minister of the Army Reorganisation Council. During the five years of his viceroyalty, he raised and equipped six divisions of troops, greatly superior in every way to those of the Peking field force or the best provincial levies. But his rapid rise to place and power aroused fears and jealousies of a number of high Manchu dignitaries, and many were the schemes for injuring him in the eyes of the Empress Dowager. Finally, the cabal against him, led by his old rival, the ex-Boxer Tartar General Tieh Liang, succeeded in persuading her Majesty, in the autumn of 1907, to transfer him from the Tientsin viceroyalty to the capital. She saved his face and her own, however, by making him a grand councillor and President of the Board of Foreign Affairs, which post he held until the death of the Empress Dowager and the Emperor in Nov. 1908.

The subsequent accession to the Regency of Prince Chun, brother of the late Emperor, was fraught with peril for Yuan. For a month after the death of the "Old Buddha," rumours were rife in the north concerning the Regent's vindictive intentions with regard to him. It was the general belief that his days were numbered; but the Regent was eventually persuaded that extreme measures would be impolitic. His decision, finally announced by an edict of Jan. 2, merely deprived Yuan of office

and ordered him into retirement at his native place in Honan. There, until the outbreak of the revolution in the autumn of 1911, he remained, professedly contented with a life free from the cares of office and devoted to the management of his estates. But the lack of his guiding hand was unmistakably felt, even by his enemies, at Peking during those two years. After the death of Chang Chih-tung (1909), Yuan was the only survivor of the great Chinese viceroys to whom the Manchu Court had looked for help and counsel in time of trouble. When, therefore, the first signs of the revolutionary movement at Wuchang were followed by ominous symptoms of hostile activity amongst the Cantonese faction, the Regent lost no time in summoning Yuan to his assistance. By an Edict of Nov. 14 1911, he was appointed Viceroy of Hunan and Hupeh, with a mandate to proceed south with his foreign-drilled troops and put an end to the insurrection.

Whatever the defects of his character in other respects, there was never any doubt as to Yuan's unswerving belief in the monarchical principle as essential to the good government of China; there was therefore no question of his refusing to obey the summons of the Throne in peril. It was impossible for him to sympathise with the Republican programme, gradually evolved by the Cantonese extremists as the helplessness of the Manchus and the disorganisation of the Government became revealed. If, at the outset, he seemed disposed to temporise and to make terms, it was not because of any hesitation to face the situation, but simply because he realised that his failure or success would depend upon control of adequate funds. Before consenting to emerge from his retirement (he arrived at Peking on Oct. 27) he insisted on assurances from the National Assembly and from his foreign supporters at the capital, that the sinews of war would be forthcoming. If he eventually failed in his brave endeavour to maintain the monarchy, it was because, at the most critical juncture of the struggle, the predominant influence of Great Britain with the Diplomatic Body was finally exercised in favour of a policy of impartial neutrality.

Yuan clearly foresaw and declared that if the Monarchy were overthrown, the result would be chaos, "amidst which all interests would suffer and for several decades there would be no peace." Thus his avowed policy was to preserve a limited Monarchy, pledged to systematic and practical reforms. Had he been loyally served by his representative, Tang Shao-yi, in the negotiations with the revolutionary leaders at Shanghai, above all, had he received the support which he was entitled to expect in the shape of a foreign loan, he would most probably have won. As it was, he continued to fight on, practically single-handed, against the forces of disruption, until Feb. 1912 when the Manchu Court, terrified by bomb explosions at the capital, decided to abdicate. Within two days of the issue of the abdication Edict. (Feb. 12), the Southern revolutionaries, on the initiative of Sun Yat-sen, exemplified the "unbroken continuity of immemorial tradition" in China by inviting him to stand for the Presidency of the Republic.

Despite his previous declaration that "to be a party to the establishment of a Republican form of government would brand him as a liar before all the world," Yuan made a virtue of necessity and on March 12 took the oath of office as President. But he did so with mental reservations which were soon demonstrated and ostensibly in deference to the sanction of the new form of Government given by the Throne in its abdication Edicts. His policy as president reflected his unmistakable and fixed determination to maintain the authority of the central Govt. and with it the prerogatives and practice of benevolent despotism. He continued to uphold the principles which he had publicly proclaimed in justification of his defence of the monarchy, and to insist upon maintenance of the continuity of the classical tradition of Government and the preservation of the Confucian system. He was willing for a time to pay lip-service to the Republican formulas, but his actions proved clearly that he had no sympathy with the "rampant democracy" of the Cantonese Radicals. His methods of ridding himself of prominent members of the Kuo-Min tang (Radical party) who opposed his authority were typically Oriental and ruthless, but being in accordance

with Chinese traditions of statecraft, they aroused no popular indignation beyond the ranks of the Republican group of politicians.

In the summer of 1913, a "war to punish Yuan" was started in the south by Sun Yat-sen, Huang Hsing and other malcontents, but Yuan, having by this time secured a foreign loan and the moral support of the Powers, had no difficulty in retaining the venal "loyalty" of the chief military commanders in the provinces; the Cantonese insurrection came, therefore, to a swift and inglorious end. He proceeded, thereupon, to dissolve and proscribe the Kuo-Min tang and with it made an end of its farce of parliamentary Government and representative institutions. Upon his formal "election" to the Presidency in October, he announced his intention of governing the country thenceforward without interference. He took occasion to observe that "he had always preferred conservative to radical courses," and denounced the "minority of turbulent demagogues" who, under the name of Republicanism, had "dragged principles and laws in the dust"; finally he declared his intention of proceeding with a policy of gradual and suitable reforms. The dissolution of the Kuo-Min tang was naturally followed by the abolition of the national assembly, and Parliament was replaced by a political council, consisting chiefly of Yuan's own nominees. The provincial governorships having been similarly filled, he was able to proceed with his schemes for the centralisation of power and the restoration of autocracy; unanimous recommendations by the provincial authorities enabled him to assert in his presidential mandates that they were in accordance with the will of the people. Similarly fortified by their approval, after the suspension of the provisional constitution and other significant measures, he announced his intention of performing the winter solstice sacrifice at the temple of heaven, a declaration tantamount, in Chinese eyes, to the assumption of autocratic rulership and the impending restoration of the throne. That he should aspire to revive the monarchy in his own person was the logical conclusion of his openly avowed principles; as a matter of internal politics, his ambition was not only defensible but likely to be justified by results.

The movement for the restoration of the throne organised by a society composed chiefly of Yuan's adherents, began to assume a definite direction in the autumn of 1915; its plans and propaganda were skilfully handled, but, like Yuan himself, they erred in failing to appreciate the necessity for conciliating foreign, as well as native, opinion. The leaders of the movement failed especially to perceive the danger of the situation created by Japan's twenty-one demands (May 1915) and to realise that the active opposition of the Japanese Govt. would in all probability be fatal to Yuan's ambitions. Warned in this sense from more than one quarter, Yuan nevertheless persisted. In Oct. the State council made an elaborate show of constitutional procedure by referring the question of the monarchy to the provinces. The result (a foregone conclusion) was a practically unanimous vote in favour of Yuan's accession. Meanwhile, however, the Japanese Minister at Peking, supported by his British and Russian colleagues, had made friendly representations to the Chinese Foreign Office, deprecating the restoration of the monarchical system at this juncture. Yuan apparently believed that the War in Europe would prevent the Allies from actively intervening and overlooked the possibility of serious opposition being organised against him in China. On Dec. 12 the monarchy was proclaimed and the enthronement ceremony fixed for Feb. 9 1916. But it was not to be. A week after the issue of the mandate in which this announcement was made, an insurrection, led by one of Yuan's own nominees, broke out in Yunnan; several of his provincial military commanders proved disloyal and the movement began to spread with great rapidity, one province after another declaring its independence. On Jan. 22 Yuan was persuaded to announce that the establishment of the monarchy would be indefinitely postponed. But the tide of ill fortune was now running too strongly against him and his position soon became untenable. At the end of March, his few remaining supporters urged him to retire into private life. Towards the end of April he consented, while retaining the Presidency, to surrender all civil authority

to the Cabinet, under the premiership of Tuan Chi-jui. Had he lived, some compromise of this kind would most probably have been arranged, but his health gave way and on June 6 1916 he died. With him passed the last of the great Viceroy of the old régime and the last hope of an early restoration of stable government in China. (J. O. P. B.)

**YUDENICH, NIKOLAI NIKOLAEVICH** (1862— ), Russian soldier, was born July 18 1862. He entered the army in 1879, and from 1887 to 1902 served on the general staff. In 1902 he became a regimental commander, in 1905 a general, an assistant chief of staff in 1907 and a chief of staff in 1913. At the beginning of the World War he commanded the II. Turkistan Corps with marked success and was soon placed in command of all the military forces in the Caucasus, a post which he held till the arrival of the Grand Duke Nicholas in 1915. In March 1917 he resumed command, but here as elsewhere further advance was rendered impossible by the increasing disorganisation of the Russian army. In 1919 Yudenich led anti-Bolshevik forces in an attempt against Petrograd (Leningrad). This venture was a failure and shortly afterwards Yudenich went into retirement.

**YUGOSLAVIA**, officially known as "the Kingdom of the Serbs, Croats and Slovenes" (Kraljevina Srba Hrvata i Slovenaca), came into being in the closing months of 1918, as a result of the collapse of Austria-Hungary and the voluntary union of its Yugoslav territories with the former Kingdoms of Serbia and Montenegro. In point of international law, its existence may be said to date from Dec. 1 1918, when the Prince Regent Alexander of Serbia formally complied with the invitation of the Yugoslav National Council, to assume the Regency over the sister provinces also. That the Great Powers were so long in according official recognition to the new State, was due to purely political reasons, connected with the Adriatic dispute. The previous history of the units which now comprise the Yugoslav kingdom, will be found under SERBIA, MONTENEGRO, CROATIA-SLAVONIA, BOSNIA-HERCEGOVINA, DALMATIA.

*Area and Population.*—The new State covers a total area of 96,136 sq. m. whereas Serbia before the Balkan War only comprised 19,286 and after her conquests in 1912-13, 36,938 square miles. The area of the other provinces is:—Bosnia-Herzegovina, 20,429; Croatia-Slavonia, 16,920; Slovenia, 6,241; Voivodina, 7,213; Dalmatia, 4,662; Montenegro, 3,733. The total population at the census of 1921 was 12,017,323 or a net decrease of 608,444 during the previous 11 years in the area corresponding to the new state. This decrease, due to the ravages of the two Balkan Wars and the Great War, was naturally heaviest in Serbia proper (316,271 or 10.9%), in Macedonia (222,599 or 13.4%) and Montenegro (38,566 or 16%). This is the more striking because in the two decades 1890-1910 Serbia's population was increasing at the rate of 3.6% (or 749,740 in a total of 2,911,701 inhabitants). The only province which showed an increase of population was the Voivodina (+27,569 or 2%). That the decrease was much less marked in the provinces north of the Save and Danube line was due not only to the fact that the War hardly reached them, but also to the steady immigration into them from Hungary since 1918.

The population was divided as follows:—Serbia (1912 area) 2,655,078; Southern Serbia (*i.e.* Macedonia, etc.) 1,474,560; Montenegro 199,857; Bosnia-Herzegovina 1,889,929; Dalmatia 621,429; Croatia-Slavonia (with Medjumurje) 2,739,593; Slovenia (with Prekomurje) 1,056,464; Voivodina (Banat, Bačka, Baranja) 1,380,413. On a basis of nationality the population is divided as follows:—Serbo-Croats 8,946,884 (74.4%), Slovenes 1,024,761 (8.5%), Germans 513,472 (4.3%), Magyars 472,409 (3.9%), Albanians 441,740 (3.7%), Rumanians 229,398 (1.9%), other Slavs (Slovaks and Ruthenes) 174,466 (1.5%), Italians 12,825 (0.1%), "others" (*i.e.*, mainly Turks, Spanish Jews, Gypsies) 201,368 (1.7%). Thus the Yugoslav population amounts to 82.9% of the total.

Religious distribution shows the following results: Orthodox 5,602,227; Catholic 1,373,154; Mahommedan 1,337,687; Protestant 216,847; Jewish 64,159.

The principal towns are: Belgrade 111,740; Zagreb (Agram) 108,338; Subotica (Szabadka) 101,857; Sarajevo 66,317; Ljubljana (Laibach) 53,306; Skoplje (Uskub) 41,066; Novi-Sad (Neusatz) 39,147; Osijek (Essek) 34,412; Sombor 31,332; Senta 30,697; Maribor (Marburg) 30,641; Bitolj (Monastir) 28,418; Beckerek 27,511; Vršac 26,975; Kikinda 25,809; Niš 25,096; Split (Spalato) 25,042.

## I. POLITICAL HISTORY

*The Adriatic Dispute at Paris.*—At the Paris Conference there was from the first a deadlock in the Adriatic dispute (*see*

SERBIA). M. Clemenceau and Mr. Lloyd George found themselves between two irreconcilable standpoints—between Sonnino, who claimed the literal fulfilment of their treaty pledges, with the addition of the port of Fiume, and Wilson, who refused all cognisance of the secret treaties and regarded them as abrogated by the Allies when they accepted his successive Notes as the basis of the Armistice. The three Western Powers were in the impossible position of judges in a dispute to which one was a party, while two were accessories. On Feb. 11 1919 the Yugoslavs offered to submit the whole dispute to the arbitration of President Wilson, and on April 16 to leave the settlement of frontiers to a plebiscite.

But these proposals were rejected by the Italians, who even withdrew for a time from Paris; and Wilson's public manifesto on the Adriatic question (April 23) so far from improving matters, actually stiffened Italian resistance. The problem was left unsolved during the final stages of the negotiations on the German treaty, and was still being postponed when on Sept. 12 D'Annunzio and his Arditì, with official Italian connivance, seized Fiume and proceeded to create a *fait accompli*. On Dec. 9 1919 the Supreme Council made a definite proposal to Italy on the basis of a slight modification of the so-called "Wilson Line," Fiume as a buffer State, a special régime in Zara, Valona in full sovereignty and an Italian mandate in Albania. Neither this nor a later improvised proposal of Clemenceau and Lloyd George (abandoning the buffer state) found acceptance, while Wilson's three Notes to the Allied Cabinets (Feb. 10 and 25 and March 6 1920), though they will always remain classic documents of the controversy, failed to overcome the opposition of Italy,

who reckoned with the eclipse of his influence at home in America.

Late in April the Yugoslavs consented to direct negotiations with Italy, but the Nitti Cabinet fell before any decision could be reached, and it was not till Nov. 12 1920 that the Treaty of Rapallo was signed.<sup>1</sup> By it Italy acquired a frontier considerably farther east than the Wilson line, the watershed of the Julian Alps as far as Snježnik (Monte Nevoso), almost all Istria with Abbazia and Volosca, and a narrow strip of shore connecting it with Fiume, which was to become an independent unit under the League of Nations, while the Croat suburb of Sušak was to remain in Yugoslavia and the Baroš Port was added as an outlet for Yugoslav trade. Zara became a free city under Italian sovereignty, but as a tiny island isthmus without hinterland or islands. Italy renounced all claim to Dalmatia, and of all the islands retained only Lussin and Cherso. Special linguistic and other privileges were assured to the tiny Italian minority in the Dalmatian towns, but no corresponding charter was granted to the 400,000 to 500,000 Slovenes and Croats annexed to Italy.

The settlement, though far from ideal, involved concessions on both sides: and Italy though still forgetful of the principles enunciated at the Roman Congress, could at least claim to be the only victorious Power which had relinquished its hold upon conquered territory. One practical result of the Treaty was that Italy tacitly abandoned the cause of King Nicholas and accepted as inevitable Montenegro's incorporation in Yugoslavia. Unhappily Italy allowed the treaty to remain a dead letter as

<sup>1</sup> Fuller accounts of these long negotiations will be found in *A History of the Peace Conference of Paris* (ed. H. W. V. Temperley), vol. IV.

regards Fiume, which was firmly held by D'Annunzio's irregulars, to the utter ruin of its trade and prosperity. The final liquidation of the Adriatic dispute was postponed till Jan 27 1924 when Mussolini and Pašić (Pashitch) concluded the so-called "Pact of Rome" guaranteeing the Peace Treaties of St. Germain, Trianon and Neuilly and promising neutrality if either should be attacked by a third party. A supplementary agreement recognised Italy's annexation of Fiume, but left to Yugoslavia the Baroš Harbour and also a free commercial zone in Fiume itself, with proper railway access.

*The New Frontiers.*—In four other directions also the regulation of the new frontiers was a slow and difficult process.

1. The frontier between Yugoslavia and Rumania rests on a decision of the Peace Conference, published on June 13 1919. Rejecting equally the frontier fixed by the secret Treaty of 1916, under the terms of which Rumania entered the War, and the line up to which the Serbs had been allowed to occupy after the Armistice, the Allies divided the Banat on a mainly ethnographic basis. At the last moment they drove two awkward salients into Rumanian territory, in order to include Vršac and Bela Crkva in Yugoslavia, thereby blocking the railway outlet of Timișoara and Arad towards the Danube at Bazias.

2. The regulation of the Austro-Yugoslav frontier was decided according to a plebiscite supervised by an inter-Allied Commission at Klagenfurt. After a keen contest between rival Slovene and Pan-German propagandists, voting took place in Oct. 1920 and resulted in a majority of 12,747 for Austria in Zone A (the more southerly section in dispute), whereupon Zone B also was automatically assigned to Austria.

3. By the Treaty of Neuilly (Nov. 27 1919) Bulgaria was forced to cede to Yugoslavia (a) the Strumnica salient, which threatened the Vardar railway from the east, (b) the district of Kočana and the Bregalnica and (c) the town and district of Tsaribrod, which places Sofia strategically at the mercy of her neighbour.

4. The Albanian frontier remained in suspense till 1921, when the Supreme Council sanctioned the line laid down by the Council of Ambassadors in the winter of 1913, thus putting an end to the disreputable design favoured in some quarters of an Italo-Yugoslav "deal" on the lines of "Skutari for Fiume."

5. The frontier with Hungary was the last to be regulated. By the Treaty of Trianon the Banat (save a small Magyar triangle opposite the city of Szeged) was divided between Rumania and Yugoslavia, while the latter received the whole Bačka (except Baja and district), part of the Baranya (forming the angle between Drave and Danube) and the Medjumurje (between Drave and Mur). Thus, in order to secure the town of Subotica (Szabadka) with its large Bunjevac (or Catholic Serb) population, she was allowed to annex not less than 250,000 Magyars. Her claim to Pécs (Fünfkirchen) was disallowed, but owing to the long delay in ratifying the treaty Yugoslav troops remained in occupation of this district and its valuable coal-mines till Aug. 1921.

*The Provisional Parliament, 1918-20.*—So long as vital frontier disputes were unregulated, the central Government in Belgrade held that elections could not be held, and governed for the first two years through a provisional Parliament for which no one could claim a really representative character. The deputies for Serbia held mandates which had actually expired as long ago as June 1914, but whose renewal war and invasion had prevented; those for Croatia had been elected in Jan. 1914, those for Montenegro were delegated by the revolutionary Assembly of Podgorica in Nov. 1918. But in Bosnia and most of the other provinces the deputies had no popular mandate whatever, beyond being members of the revolutionary local committees formed when Austria-Hungary collapsed. The union of so many distant political organisms had reduced the party system to a state of chaos, and the first two years were taken up by a process of regrouping, the issue being centralism versus federalism.

There was a very keen struggle between the Radicals, who still possessed the best party machine and stood for a narrowly Serbian as opposed to a Yugoslav programme, and the newly constituted Democratic party, which absorbed most of the Serbian Opposition parties, the old Serbo-Croat Coalition of Zagreb and the Slovene Liberals. The Radicals of Serbia, being conservative in all but name, made a working alliance with the Clericals of Zagreb and Ljubljana, and under the leadership of Protić favoured decentralisation, combined with concessions to the expropriated land-owners. But in the land question the Radical party was paralysed by its Bosnian wing, which sided with the peasantry; and thus in Aug. 1919 Protić

was replaced by Davidović, the Democrat leader, and though the government remained a Coalition, its weight was transferred farther to the Left. An internal trial of strength continued throughout the winter between the rival governmental groups, until in May 1921 a breach was averted only by a reconstruction of the Cabinet under Vesnić, who as Serbian Minister in Paris since 1905 enjoyed wide prestige, and, though a Radical, stood aloof from party dissensions. Under his weaker but more neutral guidance, and aided by the unifying force of the Adriatic crisis, the parties reached agreement upon a new parliamentary franchise, based on universal suffrage.

*The Constituent Assembly and the Constitution.*—The elections to the Constituent Assembly (Nov. 1920) did not clear up the situation as had been expected. No party secured an absolute majority, and the two strongest, the Radicals and Democrats, being almost exactly balanced, were forced to prolong still further their unnatural alliance. In open opposition stood (a) Stephen Radić, the Croat peasant-leader whom the Democrats had unwisely imprisoned in 1919-20 and who now swept the boards in Croatia with a republican and federalist programme and induced his party of 50 to absent itself from the Constituent Assembly; (b) the Croat and Slovene Clericals, who strongly advocated decentralisation; and (c) the 58 Communists, led by a small group of extreme theorists, but owing their strength to the subversive elements in the Bačka, Macedonia and Montenegro and the secret aid of the Carlists in Vienna and Budapest. As the Coalition lacked the necessary majority, it was reduced to gathering support piecemeal among the more neutral groups and for this task Pašić, who became Premier in Jan. 1921, was specially qualified.

By the promise of 100,000,000 dinars to the expropriated Beggars, he won over the Moslems of Bosnia, and by similar methods he detached the Slovene section of the newly founded Agrarian party (Zemljoradnici). But though he was thus able to carry the first reading of the new constitution by 227 to 93 votes (May 12), he was faced by the passive resistance of the great majority of Croats and Slovenes, who regarded with suspicion his "Great Serbian" and centralising aims. It is significant that Protić, hitherto Pašić's most intimate associate, withdrew from the Radical party and from Parliament rather than sanction a constitution so inimical to provincial interests; while Trumbić, the foremost advocate of full national unity, recorded his vote against it.

*The Struggle between Centralists and Federalists.*—On June 28 (Kosovo Day) the Prince Regent took the oath to the new constitution, but the ceremony was marred by an attempt to assassinate him and the Premier by a bomb thrown as they drove home to the palace. This outrage, which was traced to the Communists, provided fresh proof that the Democratic leader Drašković, as Minister of the Interior, was justified in his charges of widespread terrorist conspiracy and even in the much-debated Decrees (Obznane) by which he sought to combat them. When on July 21 Drašković was murdered by a young Bosnian Communist, Parliament resolved on reprisals, and 10 days later passed, by 190 to 54, laws of extraordinary severity for "the Defence of the State," terrorist agitation being made punishable by death, prolonged penal servitude or heavy fines. The mandates of the 58 Communist deputies were annulled, and the party rendered ineffective.

As the Croat Peasant party under Radić maintained its unwise policy of abstention, the parliamentary opposition became almost negligible, but the dissensions between the two governing parties rendered constructive work impossible. At last in the winter of 1922 it came to an open breach and the Democratic Ministers resigned. After the failure of prolonged attempts to produce a compromise between Davidović and Radić, the King invited Pašić to form a purely Radical Cabinet, which appealed to the country. The elections of March 1923 still brought no definite decision. The Radicals increased from 91 to 108, and the Croat Peasants from 50 to 70, while the Democrats fell to 52. The Government lacked a majority, but so long as Radić and his followers refused to take their seats in the

Skupština, there was no possibility of overthrowing or replacing it. Negotiations between Radić and emissaries of Pašić failed, and in Aug. after a series of indiscreet and inflammatory speeches Radić fled abroad, and settled first in London, then in Vienna, in the hope of interesting Western opinion in his cause. Early in 1925, from this retreat, he reached a working agreement for a joint Opposition bloc with the Democrats, Agrarians, Slovenes and Moslems, and instructed his deputies to enter the Skupština. Pašić saved himself for the time from a precarious situation by allying himself with the dissident Democrats under Pribičević who were strongly Centralist. From April till July there was a prolonged political crisis, during which Government and Opposition used threatening language toward each other.

At last on July 27 Davidović and his bloc were invited to form a Cabinet, which the Radić party supported but did not enter. Radić, who had meanwhile visited Moscow and coquetted with the "Peasant International," now returned home and undermined the Government's position by a series of more than usually indiscreet speeches, with the result that on Oct. 15 Davidović, under pressure from the Crown, the army and other quarters, resigned office. After another long crisis he was replaced by a "Concentration Cabinet" under Pašić and Pribičević which only commanded 123 votes out of a total of 315; it therefore ordered new elections, quashed the last Cabinet's enquiries into corruption and governed on rigidly centralist lines. In Jan. 1925 it went so far as to dissolve the Croat Peasant party, prohibit its newspaper *Slobodni Dom* and throw Radić himself into prison on a charge of revolutionary and anti-militarist propaganda. At the Feb. elections the Government, by employing pressure and corruption wherever possible, succeeded in securing a small working majority—163 to 152—though it polled 300,000 fewer votes than its rivals. Radić remained in prison, but with his approval his party changed its name from "Croat Republican Peasant Party" to "Croat Peasant Club," issued a new programme and formed a united bloc with Davidović, Trumbić, Korošec and the Moslems.

The Government retorted by annulling 58 out of the 67 Croat mandates. At the last moment, however, Radić's nephew Paul issued a declaration in the party's name, recognising the constitution, dynasty and army, and thus abandoning the whole basis of its agitation for the six years previous.

After a further interval Radić made his terms with Pašić, the one abandoning his alliance with the Democratic bloc while the other dropped the now useless ballast of the Pribičević group. Radić himself became Minister of Education, and though his flow of indiscreet public speeches increased rather than diminished, his statements ceased to be taken too seriously, while his stronghold upon the minds of the peasantry could now be exploited in the interests of national unity and concord. This alliance between the strongest Serb and the strongest Croat party, though setting at defiance all the political principles hitherto current, none the less represented a fresh stage in the consolidation of Yugoslavia. The federalist idea in its extreme form has probably been finally defeated, and it now remains to work out the lines of local autonomy and reasonable devolution of powers in provinces whose culture, institutions and traditions will long remain too divergent to be treated satisfactorily on uniform lines.

## II. ECONOMIC AND FINANCIAL HISTORY

**Agriculture.**—Agriculture occupies about 80% of the total population of Yugoslavia. The different provinces vary greatly in climate, soil, configuration and methods of cultivation. The coastal districts and the high Karst land immediately behind them are mountainous and often barren and present great difficulties of communication. The most fertile districts are the Voivodina (Banat and Bačka), Slavonia and Northern Serbia (especially the Mačva, Morava and Timok districts) and portions of Croatia, Slovenia and Bosnia. The principal crops are maize and wheat (40% of both being produced in the Voivodina), sugar-beet, hemp and hops (also in the north), opium (in Macedonia) and tobacco (chiefly in Macedonia and Hercegovina).

Area Sown and Production in 1924

|                 | Hectares  | Quintals   |
|-----------------|-----------|------------|
| Wheat           | 1,717,343 | 15,722,496 |
| Barley          | 363,641   | 2,934,577  |
| Rye             | 195,303   | 1,407,508  |
| Oats            | 352,674   | 3,018,477  |
| Maize           | 1,965,355 | 37,949,376 |
| Haricot beans   | 40,080    | 378,020    |
| Potatoes        | 217,953   | 10,274,825 |
| Sugar-beet      | 48,257    | 10,631,066 |
| Beet for fodder | 17,526    | 2,262,592  |
| Flax            | 13,086    | 84,746     |
| Hemp            | 25,070    | 253,076    |
| Clover          | 112,601   | 3,607,746  |
| Lucerne         | 60,345    | 1,989,442  |
| Hay             | 1,595,698 | 33,427,712 |

Admirable wines are produced in Dalmatia and Hercegovina (both rather strong), Syrmia (of the Hungarian type) and along the Danube in Serbia (Smederevo). The fruit industry is growing steadily in importance, notably in the Sumadija district of Serbia and in the East of Bosnia. In an average year some 750,000 tons of fresh plums are produced, and 40,000 to 50,000 tons of dried plums and prune pulp are exported. Great efforts are being made to improve the methods of drying and packing. The famous Maraschino liqueur is made in the district round Zara (Zadar), and excellent plum brandy (sljivovica) in almost all districts. The pyrethrum is grown in considerable quantity in Dalmatia, for the purpose of preparing insect powder. There are eight sugar factories, two state-owned, the rest in the hands of foreign banks and companies; but though the area of beet cultivation has actually grown since the partition of the great estates among the peasantry, the decline in the price of sugar in the world-market has produced a certain crisis in the industry, despite the specially low freights granted on the state railways.

**Forestry.**—The forests of Yugoslavia cover 7,500,000 hectares of land, of which all save 2,000,000 is old forest. Timber is a main article of export, Italy, Egypt and the Levant being the best customers. The most important state forests are in Bosnia, beech, fir and oak being the commonest trees. The Slavonian oak (known abroad as "Austrian oak") is valuable and of high quality. In Serbia 60% of the forests are beech. At Teslić there is a wood-distilling factory which is the largest in Europe and produces methylated spirit, alcohol, formaldehyde, acetone and other chemical products. Here and at Bijeliseč charcoal is produced by the dry distillation process. In Slovenia large quantities of tannin are produced. There are cellulose factories in Bosnia and Belgrade, and bentwood furniture is manufactured to a considerable extent in Slovenia and Croatia.

**Livestock.**—The livestock of the country, though greatly depleted by the War, afterwards rapidly revived. In 1924 there were 1,062,893 horses (46,800 being exported), 3,869,985 horned cattle and 7,639,257 sheep (half of the latter being in Serbia). Pigs are estimated at between 2,500,000 and 3,000,000. Goats are naturally most numerous in the poorer districts of the South (Hercegovina, Dalmatia, Montenegro).

**Mining and Mineral Resources.**—The mineral resources of Yugoslavia have for the most part lain idle since Roman and mediaeval times, but offer very great possibilities. Iron ore of good quality occurs in enormous quantity and near the surface at Ljubija, in Bosnia, where it is mined by the state mining authorities and sold

for exportation. Another iron mine worked by the State exists at Vareš, in Bosnia, and is worked in conjunction with a coal mine and iron-smelting establishment and the ironworks at Zenica. The metallurgical works here are on a primitive scale, their production being pig-iron and small castings. The ironworks at Jesenice (Slovenia), which have a capacity of 70,000 per annum, produce bar iron, iron and steel sheets, steel rails up to 22 kilogrammes per metre (as used on the Bosnian narrow-gauge railways), cold rolled iron, drawn iron and wire nails. Bar iron is manufactured at Store, near Celje, in Slovenia; steel and steel springs at Guštanj, on the Maribor-Klagenfurt railway, and highly-silicated foundry iron is produced at Sopusko in Slovenia. Large deposits of brown coal and lignite occur in many parts of Yugoslavia, but there is no coking coal. Copper is produced at Bor and Majdanpek in Serbia, the first mentioned being an important concern, largely in the hands of French interests.

Whereas the total production in terms of metal in 1923 was 6,700 tons for the whole country, in 1911-2 it was 7,600 tons from the Bor mines alone, and in 1917 it is estimated that from the latter mines the Central Powers obtained as much as 30,000 tons. Alluvial gold is found in the river Timok (East Serbia), manganese ores are worked near Sarajevo, lead in the Mežica valley (Slovenia), bauxite or aluminium ore in Dalmatia.

*Foreign Trade.*—The total exports in 1924 amounted to 3,734,974 metric tons, valued at 9,533,774,432 dinars—the principal items being as follows:—

|                                     | Metric Tons | Dinars        |
|-------------------------------------|-------------|---------------|
| Cereals . . . . .                   | 454,046     | 1,389,852,056 |
| Beans and potatoes . . . . .        | 41,994      | 172,383,715   |
| Fruit . . . . .                     | 32,440      | 246,547,434   |
| Wine and Spirits . . . . .          | 1,508       | 9,521,227     |
| Alcohol . . . . .                   | 1,233       | 19,213,610    |
| Animal Products . . . . .           | 23,783      | 748,428,831   |
| Skins . . . . .                     | 3,452       | 276,740,543   |
| Wood . . . . .                      | 10,043      | 119,473,432   |
| Soda . . . . .                      | 21,887      | 65,917,813    |
| Calcium . . . . .                   | 37,133      | 123,591,652   |
| Cement . . . . .                    | 341,628     | 189,421,784   |
| Iron . . . . .                      | 4,070       | 33,054,229    |
| Lead . . . . .                      | 10,641      | 135,596,956   |
| Copper . . . . .                    | 7,605       | 346,490,091   |
| Other Minerals . . . . .            | 813,976     | 308,085,497   |
| Live Stock (less Poultry) . . . . . | 698,429     | 1,353,045,347 |
|                                     | (head)      |               |

Their chief countries of destination were as follows:—

|                          | Metric Tons | Dinars        | %    |
|--------------------------|-------------|---------------|------|
| Italy . . . . .          | 1,530,878   | 2,757,305,162 | 28.9 |
| Austria . . . . .        | 452,338     | 2,332,971,109 | 24.4 |
| Czechoslovakia . . . . . | 244,333     | 943,747,132   | 9.8  |
| Hungary . . . . .        | 699,284     | 756,133,382   | 7.9  |
| Greece . . . . .         | 255,374     | 676,169,377   | 7.0  |
| Switzerland . . . . .    | 70,226      | 389,554,057   | 4.0  |
| Germany . . . . .        | 45,461      | 388,962,378   | 4.0  |
| France . . . . .         | 84,205      | 362,874,301   | 3.8  |
| Rumania . . . . .        | 91,656      | 252,623,807   | 2.6  |
| Great Britain . . . . .  | 75,602      | 131,529,444   | 1.3  |

Imports amounted to 1,127,686 metric tons, valued at 8,221,743,552 dinars, the most important articles being cotton and woollen fabrics (25%) and machinery. Among the countries of origin Italy again takes first place (29.52%) followed by Czechoslovakia, Austria, Great Britain.

*Revenue and Expenditure.*—The budget for April 1 1924-March 31 1925 estimated a revenue of 10,405,000,000 dinars and an expenditure of the same amount. The actual expenditure amounted to 10,579,388,339 dinars but the revenue exceeded the estimate.

The principal sources of revenue as estimated for 1925-6 were as follows:—

| A. General:                             | Dinars                |
|-----------------------------------------|-----------------------|
| Customs duty and Customs dues . . . . . | 1,690,000,000         |
| Excise . . . . .                        | 1,810,000,000         |
| Monopolies . . . . .                    | 2,468,050,000         |
| Profit on Exchange . . . . .            | 163,000,000           |
| Turnover Tax . . . . .                  | 225,100,000           |
| Receipts from Communications . . . . .  | 2,462,850,000         |

The statistical data given above are based mainly upon an "Economic Survey of Yugoslavia" (compiled for the Department of Overseas Trades, and published in No. 11 of the *Slavonic Review*) and on "Economic Resources and Problems of Yugoslavia," by Miss M. R. Shackleton (*Scottish Geograph. Mag.*, Nov. 1925).

(R. W. S.-W.)

**YUKON TERRITORY** (see 28.945), a territory of the Dominion of Canada. With the decline of the gold-mining industry, the population decreased from 27,219 in 1901 to 8,512 in 1911 and 4,157 in 1921. In 1918 an amendment to the Yukon Act abolished the council of the Yukon and the territory is now administered by the Northwest Territories Branch of the Canadian Department of the Interior. Law and order are enforced by members of the Royal Canadian Mounted Police. The Yukon is represented in the Dominion Parliament by one member in the House of Commons.

The mineral production in 1923 was valued at \$2,972,823. Placer gold is still the principal mineral product, the value of the gold output in 1923 being \$1,243,287. The Yukon has also been a steady producer of silver and in 1923 yielded 1,914,438 oz. valued at \$1,241,953. Lead production amounted to 6,771,113 lb. worth \$486,098. The wide distribution of the ores of gold, copper, silver and lead indicate enormous mining possibilities. Coal, of which there are large reserves, is mined in small quantities, 313 tons valued at \$1,485 being produced in 1923. Large game and fur-bearing animals abound. The value of pelts purchased by traders from trappers in the Yukon during the season of 1922-3 amounted to \$199,522.

**ZAGHLUL, SAAD** (1860— ), Egyptian pasha, was the son of a notable in the district of Ibiān, Gharbia Province. He was educated at the village school and afterwards at the University of El Azhar, in Cairo. When he had completed his prescribed course of studies, he was, in 1880, appointed editor of the *Official Journal*. Later he was nominated a Moawin under the Ministry of the Interior and eventually became Chief of the Contentieux for the province of Giza. Involved in the Arabi revolt, he was one of the many notables detained on the occupation of Egypt by British troops in 1882. On his release he ceased to hold office and in 1884, when the native tribunals were instituted, he began to practice at the bar. In 1892 he was appointed counsellor of the native court of appeal. Having become proficient in the French language and in the science of law, he obtained his diploma in law. He became Minister of Education in 1906, and under his "enlightened administration" it was said by Lord Cromer (*Modern Egypt*, vol. II., p. 535) that "education in Egypt made rapid strides in advance." A change of the Ministry during Lord Kitchener's tenure of the Cairo Agency resulted in Zaghlul's ceasing to hold the Portfolio for Education, but he was appointed vice-president of the Legislative Assembly and he took a special interest in its deliberations until the outbreak of the World War.

On the signing of the Armistice Zaghlul, who had for long been considered the principal spokesman of the Nationalist party, appealed to the Residency in Cairo for the recognition of Egyptian independence, basing his demand on President Wilson's self-determination policy to which effect had been given by the British Government's issue of a proclamation defining the status of the other countries liberated from Turkish rule by the War. When his proposal that he and some representative Nationalists should visit London to press their views was refused by the Government, he became discontented, and his attitude was so hostile that he and three others were arrested on March 8 1919 and deported to Malta. This was the signal for a murderous outbreak in Egypt in which British officers and others were killed and the country became much disturbed. Zaghlul and his friends were later released by Lord Allenby, and freedom of travel, which War measures had hitherto restricted, was permitted to all. A special mission under the chairmanship of Viscount Milner was sent to Egypt in Nov. 1919 to inquire into matters and make representations. Zaghlul eventually came to London and discussions between him, Adly Pasha and Lord Milner took place, the results of which were published in the "Milner Report."

Zaghlul returned to Egypt early in 1921, where he represented the extreme Nationalist party in opposition to the more moderate ministry under the presidency of Adly Pasha. At the end of the year, when the trouble again broke out in Egypt, Zaghlul was arrested once more and deported, first to Aden and then to the Seychelles. In Sept. 1922 he was transferred to Gibraltar, whence he was released on April 4 1923, on the grounds of ill-health. After the promulgation of the new constitution, martial law was abolished and Zaghlul was free to return to Egypt. An enthusiastic reception was accorded to him on his landing at Alexandria and in the elections of Jan. 1924 his supporters gained an overwhelming majority. Yehia Ibrahim Pasha resigned and Zaghlul formed a ministry. The question of the evacuation of the Sudan now became prominent and conversations took place in London (Sept. 25—Oct. 3) between the Egyptian and British prime ministers; Zaghlul refused to modify his intransigent attitude and returned to Egypt. On Nov. 19 1924 Sir Lee Stack, the Sirdar, was assassinated and Zaghlul was forced to resign. (See EGYPT.)

**ZAGREB**, Yugoslavia (see 1.382).—Zagreb or Agram has increased largely in population (79,083 in 1910; 108,338 in 1921), as the influx of officials and business men since the formation of the state of Yugoslavia has outweighed the exodus of Magyars

and Germans. Zagreb is the second city of the kingdom and its financial and commercial centre. It is also the home of an aristocracy and a seat of culture on a level with more famous European centres. Previously the centre of the Yugoslav movement, it is now particularist and Croat in sympathy. The modern part of the town, with tall buildings, wide streets and large open spaces, stands in a long narrow tract between the levels along the river Sava and the ridge on which the old town, with its narrow winding streets, is situated. An exchange was opened in 1919, and additions have been made to the buildings of the medical faculty at the university, but little building is in progress. A hydroelectric station has been planned, but sufficient capital was not forthcoming in 1925. The chief industries are the manufacture of linen, leather and tobacco. A trade fair is held twice yearly, and a motor exhibition was instituted in 1924 and is intended to be annual. Work is in progress on a railway to unite Zagreb with Spalato (Spljet) and Sebenico (Šibenik).

There were nationalist disturbances in the town in 1912, and the two military courts of justice which sat here during the World War were considered too strongly Croat in sympathy by the authorities at Vienna and Budapest, so that in 1918 prisoners on trial for treason or military offences were sent to Bratislava (Pressburg). In that year, when the Austrian empire was breaking up, an independent nationalist body assembled at Zagreb. In 1924 there was serious rioting between the Croat Nationalists and the Yugoslav Sokols at a meeting of these patriotic athletic societies in the town.

**ZAÏMIS, ALEXANDER** (1855— ), Greek statesman, was born in Athens Oct. 28 1855, and came of a family of politicians. Entering public life rather from duty than ambition, Zaïmis became the "utility man" of Greek politics; thus he was first appointed Prime Minister in Oct. 1897, to clear up the aftermath of the disastrous Greco-Turkish War. Resigning in 1899, after having accomplished that task, he again became Premier after the "Gospel Riots" had caused the fall of Theotokes in Nov. 1901, but succumbed to the majority which supported his uncle, Deliyannes, in 1902. In Sept. 1906 he was appointed high commissioner of the Powers in Crete, a post which he held until 1911. In 1913 he was appointed governor of the National Bank. He became Premier for the third time in Oct. 1915, but returned to the Bank after a month's office, emerging, however, to resume the premiership in June 1916. He became for the fifth time premier in 1917, and announced to King Constantine the decision of the three Protecting Powers that he must abdicate. He then retired again to the National Bank, but was removed on the restoration of King Constantine. After the King's second abdication, Sept. 1922, Zaïmis refused a sixth premiership, and was talked of as a possible president.

**ZANGWILL, ISRAEL**, (1854—1926) English man of letters, (see 28.956) died Aug. 1 1926.

**ZANZIBAR** (see 28.958) had a population (1921) of 221,925, including 295 Europeans and 18,965 Asiatics, mostly British Indians. In 1924 the population had fallen to 203,265 (Zanzibar island 115,616; Pemba island 87,649). With the development of trade direct between Mombasa and Dar-es-Salaam and oversea ports, Zanzibar has lost its pre-eminence as the entrepôt for the commerce of East Africa, but Zanzibar and Pemba islands continued to provide the greater part of the world's supply of cloves. The port, too, still commands the coastwise trade with the mainland, and the very considerable dhow traffic with Arabia and Persia.

*History*.—The Sultan (Sayyid) Ali bin Hamud, a young man educated at Harrow and fond of travel, abdicated in 1911. (He died in Paris in 1918). His successor, Sayyid Khalifa bin Harud (born 1879) was a great nephew of Sultan Barghash. Sayyid Khalifa showed the greatest loyalty to the British connection, and, as the leading Moslem prince in East Africa his moderating influence did much to steady Moslem opinion in

that part of Africa during the World War. The most dramatic incident of the War, for Zanzibar, was the sinking of the ancient British cruiser "Pegasus" by the German cruiser "Königsberg" on Sept. 20 1914, the "Pegasus" being at the time at anchor in Zanzibar roadstead, undergoing repairs.

In July 1913 the control of the protectorate was transferred from the Foreign to the Colonial Office. The governor of British East Africa (Kenya Colony) was appointed High Commissioner of Zanzibar, the local administration being in the hands of a British Resident. The High Commissioner had, however, little time to spare from Kenya to supervise the affairs of Zanzibar, where local feeling was also against centralisation. In Sept. 1925 the High Commissionership was abolished and the British Resident became directly responsible to the Colonial Office. In 1926 the purely advisory council which had existed for some years was superseded by a nominated legislative council, with six unofficial members, holding their seats for three years. Of this council the British Resident is president, and has a casting vote.

**Economic Conditions.**—Trade is largely dependent on the clove harvest, the only other important industry, apart from trans-shipment of goods, being the production of copra from the coco-nut palm. In poor seasons profits are precarious, for the islands are dependent upon the free immigration of labour from the mainland and rates of pay are high. Many of the Arabs, who own the large clove plantations, are backward in the systematic planting of new trees—the only means of indefinitely maintaining supplies, all land suitable for cloves being under cultivation. The average clove crop for the 20 years ending 1924 was 512,000 frassas; the crop for 1924-5 was over 700,000 frassas. (A frasca equals 35 lb. avoirdupois.) For copra the average yield for 10 years ending 1923 was 534,000 frassas; in 1924 the yield was the highest recorded, being 988,000 frassas. The copra, however, is generally of poor quality.

During 1920-5 improvements at Zanzibar harbour included the building of a concrete wharf 800 ft. long, and the erection of a clove depot and goods sheds. The loss of part of its transit trade was shown in the shipping returns. The tonnage of shipping using the port was 1,503,000 in 1913 and 1,068,000 in 1924. The trade returns, with the rise in the price of commodities, showed an increase. Imports were valued at £1,103,000 in 1913 and at £2,223,000 in 1924. Exports in 1913 were valued at £1,048,000 and in 1924 at £2,286,000. Trade is mostly with India, Tanganyika and Great Britain. The chief source of revenue is the customs. Revenue increased from £275,000 in 1913 to £580,000 in 1923 and was £498,000 in 1924. Expenditure in 1913 was £248,000; in 1923 £480,000 and in 1924 £452,000.

**BIBLIOGRAPHY.**—Annual Reports issued by the Colonial Office, London, and the *East African Red Book* (Nairobi, periodically); J. E. Craster, *Pemba, the Spice Island of Zanzibar* (1913); Major F. B. Pearce (sometime British Resident) *Zanzibar, the Island Metropolis of Eastern Africa* (1920); *Zanzibar: an account of its people, industries and history* (Zanzibar, 1924). (F. R. C.)

**ZEEBRUGGE, ATTACK ON.**—On April 22-3 1918, an attack was made by British forces on the German submarine bases at Zeebrugge and Ostend in order to block the entrance to the Bruges ship canal and bar all passage to the Flanders flotilla of submarines. At both Zeebrugge and Ostend the entrances are narrow (about 300 ft. wide) running between two piers. At Zeebrugge on the west side of the entrance a great mole sweeps out for 1½ m. to a lighthouse at the end where the Germans had erected a battery of three 5.9-in. and six 4-in. guns.

**British Plan of Attack.**—The general plan of attack was simple. Supported by the fire of two monitors, a cruiser was to assault the mole on its outer side and divert the German fire from three blocking ships which were to dash in and be scuttled in the entrance. A short viaduct joining the mole to the shore was to be blown up by a submarine. Ostend was to be blocked simultaneously by two blocking ships. The whole coast bristled with guns and the chance of success depended largely on an effective smoke screen.

**The Attacking Forces.**—The attacking force consisted of the old cruiser "Vindictive" (5,750 tons displacement, 320 ft. long, 24

ft. draught) armed with 10 6-in. guns and specially equipped with one 11-in. and two 7.5-in. howitzers, Stokes' mortars, flame throwers, Lewis guns and pom-poms. She was commanded by Capt. Alfred B. Carpenter (awarded V.C.); she carried a storming party of 1,030 sailors under Capt. Henry Halahan and 750 Royal Marines under Lt.-Col. Bertram Elliott; she was supported by two Liverpool ferry boats, the "Iris II." (Comm. Valentine Gibbs) and "Daffodil" (Lt. Harold G. Campbell). Her task was to storm the mole. The blocking ships were the old cruisers "Thetis" (Comm. R. S. Sneyd), "Intrepid" (Lt. Stuart Bonham-Carter) and "Iphigenia" (Lt. E. W. Billyard-Leake). Behind them were 13 destroyers under Capt. Wilfred Tomkinson, 18 coastal motor boats (55 ft. long; 3 ft. draught, 35 knots, two 18-in. torpedoes) under Lt. Arthur Welman, and 33 motor launches for smoke screens and inshore rescue work. Submarine C. 3 (Lt. Richard Sandford) was to blow up the viaduct. In command was Rear-Adm. Roger Keyes with his flag in the destroyer "Warwick." At Ostend the blocking attempt was to be made by two old cruisers, the "Brilliant" (Comm. Alfred E. Godsal) and "Sirius" (Lt. Comm. H. N. Hardy) supported by five bombarding monitors, eight British and six French destroyers with 18 motor launches under Comm. Hamilton Benn.

**The Attack.**—The force started at 4:53 P.M. on Monday, April 22; the bombardment was to open at 11:20 P.M.; the smoke screen was to start at 11:40 P.M.; the "Vindictive" was to reach Zeebrugge mole at midnight; the first blocking ship was to pass the lighthouse at 12:25 A.M. Twelve miles from Zeebrugge, the force took up its formation for attack. The night was overcast with a light wind from the northeast; the small craft dispersed and soon a thick cloud of smoke began to roll down the coast, shrouding everything from sight. But as the "Vindictive" neared the shore, the wind shifted to the southward and the smoke screen drifted back. A glare of searchlights fastened on her and under a tornado of fire the storming party drawn up ready to rush ashore suffered heavily and lost both its leaders. The intention was to run alongside the mole close to the battery, but a sluicing tide carried the ship about 300 yd. farther on.

**The Storming of the Mole.**—It was one minute past midnight when the "Vindictive" ran alongside the mole. This was a critical moment, for the rush of the three-knot tide created a heavy swell which threw the ship off the mole, but the little "Daffodil" came up and, butting the ship bodily into the mole, enabled the storming party to get ashore. They got ashore but a mass of barbed wire lay between them and the battery. As they were gathering for the assault, a great sheet of flame rose with a roar into the sky. The viaduct had gone up. Lt. Sandford had jammed C. 3 with 5½ tons of amatol successfully into it. It was 12:20 A.M. There was fighting on the mole and here Captain Bamford and able seaman Mackenzie won V.C.s. By 12:50 the blocking ships were in and the "Daffodil's" siren blared out the order to retire.

*The Retirement.*—The storming party retired in perfect order, bringing their wounded with them. Capt. T. M. Palmer refused to leave the shore and was subsequently numbered among the missing men for whom he had waited. The "Daffodil" pulled the "Vindictive's" bows off the mole. The "Iris II." came under a heavy fire; and her commander and Maj. Chas. Eagle were mortally wounded, but Lieutenant Spencer, himself seriously wounded, steered her clear, while motor-launch 558 hid her in a friendly cloud.

*Action of the Blocking Ships.*—Meanwhile the three blocking ships had passed in under a storm of shell. The "Thetis" fouled a net and ran aground. The "Intrepid" ran right into the canal and Lt. Bonham Carter blew the explosive charges, then with six others got on board a Carley raft and was picked up by M. L. 282 (Lt. Percy Dean, awarded the V.C.). The captain of the "Iphigenia" found himself heading for the western pier, but going hard astern managed to make the entrance, drove into the gap between the "Intrepid" and eastern bank, and blew the charges. The crews were saved by the motor launches. By 1:30 A.M. it was all over and the ships were on their way back. The destroyer "Morning Star" had come under a heavy fire and had to be abandoned and sunk.

*The Ostend Operations.*—At Ostend things had gone badly. The smoke cloud was blown back; the mark buoy had been moved and both blocking ships ran ashore three-quarter mile east of the entrance. On May 9–10 another attempt was made by Commander Godsall in the "Vindictive." Under a heavy fire in which the commander was killed, the ship under Lt. Victor Crutchly just made the entrance and grounded. The crew was saved by two motor launches, under Lt. Geoff. Drummond and Lt. Rowland Bourke, both of whom were awarded the V.C. The casualties in these two attempts amounted to 637 (killed 197, wounded 413, missing 27). Zeebrugge was closed for a time, the Flanders submarines received a check, and the measure of the enterprise lies in the nine V.C.s. which were awarded for it.

**ZEPPELIN, FERDINAND, COUNT VON** (1838–1917), German airship inventor, was born at Constance, Baden, July 8 1838. He was educated for the army and received a commission at the age of 20. He served, as a volunteer, in the Federal army during the American Civil War and whilst in America made his first balloon ascent. Returning to Germany he saw active service in the Austrian War of 1866 and in the Franco-German War of 1870. In 1891 he retired from the army with the rank of general and thenceforth devoted his energies to the study of aeronautics. In 1900 he built an airship, which rose from the ground and remained in the air for 20 minutes, but was wrecked in landing. In 1906 he made two successful flights at a speed of 30 m. an hour, and in 1907 attained a speed of 36 miles. From that time onwards his airship construction made steady progress, and the success he had achieved was evidenced by the exploits of the Zeppelin airship in the World War (see **AIRSHIP**). He died at Charlottenburg March 8 1917.

**ZEROMSKI, STEPHEN** (1864–1925), Polish novelist, poet and dramatist, was born at Strawczyn Nov. 14 1864. Banished from Poland by the Russian Govt. early in his life, he first attracted attention by a collection of tragic tales entitled *The Ravens and the Crows are Picking us to Pieces* (1895, Eng. tr. 1906). In the publication of *The Homeless* (1900) Zeromski supplied a generic name for all his Polish heroes. His philosophy, full of symbolic pessimism, is clearly expounded in the novel *Aryman takes Revenge* (1904), while the triumph of evil over good is vividly treated in *The Story of Sin* (1906, 2 vol.) describing the slow and terrible downfall of a woman of culture. In his epic poem *Ashes* (1904, 2 vol.) he delineates the minds of the Polish people after the Partition and their efforts to liberate their country by serving in the Napoleonic legions. During the World War Zeromski published his great trilogy *The Fight with Satan—The Conversion of Judas* (1916), *The Blizzard* (1918),

*Charitas* (1919)—a kind of epilogue and synthesis of his previous work and at the same time an autobiography of his own life. After the Polish achievement of national independence, Zeromski turned to the drama, finally producing *The Broken Spell* (1924) in which the hero dedicates himself to the services of a resuscitated Poland. He died Nov. 20 1925.

See S. Brzozowski, *O Stefan Zeromski* (Warsaw, 1905); W. Jampolski, *Stefan Zeromski, the Spiritual Leader of the Race* (Lwów, 1918).

**ZICHY, EUGEN COUNT** (1837–1906), Hungarian traveller (see 28.979), died at Merano, Italy, on Dec. 26 1906.

**ZIEM, FÉLIX FRANÇOIS GEORGE PHILIBERT** (1821–1911), French painter (see 28.979), died in Paris Nov. 11 1911.

**ZIMMERMANN, ARTHUR** (1859– ), German diplomat was born May 8 1859 at Frankenstein. After having been vice-consul at Shanghai and acting consul in 1900 at Tientsin, he entered the Foreign Office in 1902 and rose by 1910 to be a director of the political section. In 1911 he was appointed under-secretary, and in Nov. 1916 secretary of state in succession to Von Jagow. In this capacity he addressed to America the note of Jan. 31 1917 on the subject of U-boat warfare. He was also the author of the invitation of Jan. 19 1917 to Mexico to enter into alliance with Germany and to sound Japan as to her willingness to co-operate. For Mexico the price of this alliance was to be the American States of New Mexico, Texas and Arizona. This proposal, which was sent through the medium of Von Eckhardt the German minister to Mexico, was intercepted in America and President Wilson was in a position to publish it on March 1 1917. The disclosure was one of the primary causes resulting in America's declaration of war upon Germany. Zimmermann retired on Aug. 5 1917, shortly after the resignation of Bethmann Hollweg.

**ZINC** (see 28.981).—The United States is the principal producer of both zinc ore and spelter. The Joplin area in Missouri is the principal region, but large deposits are worked in the Upper Mississippi region, Franklin Furnace (New Jersey) and, since the application of improved methods of zinc concentration, in the western States. Australia is next to the United States as a zinc producer, most of the ore being obtained from the Broken Hill district (New South Wales). Tasmania also has important deposits and occurrences are known in Queensland and Western Australia.

In Canada, the most important deposits of the metal occur in British Columbia and Quebec, these two provinces sharing practically the whole of the Canadian production in the proportions of four-fifths and one-fifth respectively. The principal countries in Europe participating in the zinc industry are Germany, Italy, Poland and Spain. For many years Germany ranked second only to the United States. Her most important deposits were in Upper Silesia, which yielded about three-fourths of the total German production. Before the War the European industry was almost wholly controlled by the German zinc convention, a widespread organisation for the control of production and selling prices.

In Italy the chief mines now worked are in Sardinia, though occurrences of ore are found in Lombardy, Piedmont and Tuscany. During the post-War period Poland produced more zinc ore than any other European country, her richest mines being situated in Silesia; her exports in 1923 amounted to 80,000 long tons. In Spain the chief zinc-mining centres are in the provinces of Santander and Murcia. The ores of Santander are mainly calamine, while those of Murcia are principally blende and galena. Mention should be made of the zinc-ores mined in the United Kingdom. These are almost invariably blende associated with galena, and occur chiefly in North Wales, the north of England, the Isle of Man and at Dumfries in Scotland. The ores occur in veins traversing the paleozoic rocks of those regions. The number of producing mines is considerable, but the output is small.

In the table on the following page the production of zinc in the principal countries of the world is set out for the three years, 1913, 1918 and 1923.

| Long Tons           |         |         |         |

**ZINOVIEV, GRIGORY EVSEEVICH** (1883- ), Russian politician, was born in Sept. 1883 at Elisavetgrad (Zinovievsk). He studied chemistry and later law at Bern University, Switzerland. He was active as a revolutionary before he was 20 and in 1903 met Lenin. He joined the Left or Bolshevik wing of the Russian Social Democratic party, of which Lenin was head. He was head of the Bolshevik party in Bern and during 1903-4 started Bolshevik propaganda in South Russia. Apart from his activities abroad, he came into prominence in Russia during 1906-8 as a member of the Bolshevik St. Petersburg committee of the R.S.D.P., by his organisation of the attempted Kronstadt rising after the dispersal of the first Duma, his editorship of the Bolshevik paper *Vpered* (Forward), and of *The Social Democrat*, the central organ of the party. In 1908 he was arrested and imprisoned but was released, the authorities being unaware of his identity. He then went abroad and did not return until the revolution in March 1917.

During these nine years Zinoviev did not cease to work for his party. He was a member of the central committee, co-editor of the principal Bolshevik publications, and representative of the party at the Copenhagen congress of the International. In 1912 he went with Lenin to Galicia to control from the nearest possible point the growing labour movement in Russia. In Galicia he founded the foreign bureau of the central committee, which guided the party work in Russia and the activities of the Bolshevik group in the Duma. During the World War the conflict between the Bolshevik party and the Social Democrats increased. Zinoviev edited with Lenin *Against the Tide*, a work of propaganda against the imperialist war; and at the Zimmerwald conference (1915) they began to organise the Communist International. On the outbreak of the March revolution (1917) they returned to Russia and at once set to work to prepare the way for the Nov. revolution. Zinoviev was co-editor of *The Pravda* and, after its suppression, of *The Proletarian* and *The Worker*. He thus became one of the leading figures in the Union of Socialist Soviet Republics. In 1919 he was elected president of the Communist International, and after the death of Lenin in 1924 was one of the most jealous upholders of pure "Leninism." His influence lasted until 1926, but in June of that year he was expelled from the political bureau. A prolific writer, he published many volumes of collected essays and speeches, which form a comprehensive guide to the problems of the revolution and of the reconstruction of Soviet Russia.

(Z. V.)

**ZIONISM** (see 28.986).—When the Zionist Organisation was founded in 1897, it set to work with a clear-cut programme. With the consent of the Powers, a charter for the colonisation of Palestine was to be obtained from the Sultan. The charter once secured, the Jews were to be systematically settled in Palestine *en masse*. Till then, the Zionist Organisation was to hold its hand and keep its resources intact. The Porte was duly approached and desultory negotiations followed. Opinion in the movement became sharply divided. The "practical" Zionists, who included most of the Zionist leaders in Russia, pressed for an immediate start to be made in Palestine.

The "political" Zionists whose strength was in Western and Central Europe, still clung to the charter as an essential prerequisite, protesting that Zionism's resources should not be dissipated on petty colonisation. The "practical" Zionists won their first important success in 1908, when a Zionist agency was established at Jaffa. At the Tenth Zionist Congress, which met at Basle in 1911, they came for the first time into control, and they maintained their ascendancy at the Eleventh Congress—the last before the War—which met at Vienna in 1913. The political field was not abandoned, but the movement now threw itself more and more vigorously into the actual settlement of Jews on the soil of Palestine. For this purpose its main financial instrument was the Jewish National Fund, which in 1914 owned property in Palestine to the value of £144,000, as compared with £35,000 in 1909 and £11,000 in 1907, when its active operations began. The marked quickening of the pace which dates from 1910 reflects the change in the direction of Zionist policy, though the resources of the movement were still small in comparison with those which were lavished upon the Jewish settlements in Palestine by Baron Edmond de Rothschild.

#### I. FROM 1910 TO THE BRITISH MANDATE

Practical Zionism was at first inclined to concern itself solely with colonisation. But between 1910 and 1914 other aspects of the movement were beginning to come into the foreground. In 1913 the Eleventh Zionist Congress, while approving an ambitious programme of rural colonisation, resolved at the same time that steps should be taken towards the early establishment in Jerusalem of a Hebrew University. Almost immediately afterwards, the Zionist Organisation found itself drawn into the conflict precipitated by the policy of the *Hilfsverein der Deutschen Juden*, a German-Jewish body which controlled a number of educational institutions in Palestine. The *Hilfsverein* laid itself open to the charge of favouring German at the expense of Hebrew as the language of instruction. The teachers rebelled, and many of the schools had to close. At this point the Zionist Organisation stepped into the breach by opening Hebrew schools of its own, and on the eve of the War, the maintenance of these schools was the principal rallying-point of Zionist enthusiasm. Between 1910 and 1914 the Organisation considerably enlarged its commitments in Palestine, and its influence was much extended.

*The War Period.*—The outbreak of the World War in 1914, followed almost immediately by the intervention of Turkey on the side of the Central Powers, brought Zionist work in Palestine to a standstill and threatened the integrity of the Zionist Organisation itself. The movement was essentially international, and its complicated constitution was unworkable in a world at war. At the end of 1914, a Zionist Bureau was established on neutral soil at Copenhagen. Meanwhile, the American Zionists, acting on their own initiative, had already set up a "Provisional Executive Committee for General Zionist Affairs" under the chairmanship of Mr. (later Supreme Court Justice) L. D. Brandeis. This body remained active throughout the War and played a part of growing importance in the direction of Zionist policy. Other groups organised themselves as best they could elsewhere, but though the Organisation was thus kept in being, its machinery was thrown out of gear, and at the close of the War, it found that in the interval the balance of forces within the movement had completely changed.

A new world was in the making, and it was now at least conceivable that the Zionists might secure something like the charter

on which they had originally staked their hopes. Political Zionism was again in the ascendant. The initiative was taken by a group of Zionists in Great Britain, headed by Dr. Chaim Weizmann of Manchester University. Dr. Weizmann was soon to become the foremost figure in the Zionist movement and the president of the Zionist Organisation, but in 1914, though already prominent, he was not within the inner circle. Not long after the outbreak of war, Dr. Weizmann and his friends were brought into touch with a number of influential public men, including Mr. Lloyd George, Mr. Herbert Samuel, Mr. Balfour and Mr. C. P. Scott of the *Manchester Guardian*. What the Zionists proposed was, in effect, that Great Britain should make it an avowed part of her policy to provide in the peace settlement for the establishment in Palestine of a national home for the Jews. Their desire was that the national home should be under British protection. Palestine was still in Turkish hands, and Great Britain could not in any case think of moving in the matter without consultation with her Allies. There was, however, even at this early stage, a growing body of British opinion which was sympathetically interested in the Zionist view of the Jewish problem and of the part which Great Britain might play in solving it.

By the beginning of 1916 the British Govt. had come to the conclusion that there were other and more practical reasons for taking Zionism seriously. In a memorandum dated March 13 1916, the British Ambassador in Leningrad (Petrograd) informed the then Foreign Minister, M. Sazonov, that "the attention of His Majesty's Govt. had recently been drawn to the question of Jewish colonisation in Palestine" and that "a numerous and most influential section of Jewry in all countries would highly appreciate the proposal of an agreement concerning Palestine which would fully satisfy Jewish aspirations." This memorandum has, up to the present, only been published in an official collection of documents from the archives of the Russian Foreign Office, but there is no reason to doubt its authenticity. This was on the eve of the Anglo-French accord defining the sphere of interest of the two Powers in the Middle East. In the Sykes-Picot agreement, as it is commonly called, Zionist interests were disregarded, and when the Zionist leaders in England formally laid their proposals before the British Govt. in Oct. 1916, there was no immediate response.

*The Balfour Declaration.*—Meanwhile, a new situation was developing in the Eastern theatre of war, and a British conquest of Palestine was becoming a possibility of the near future. At the same time, the hour of decision was approaching in the United States, where there was a Jewish population of over 3,000,000, while Russia, where the Jews were still more numerous, was steadily drifting into chaos. A declaration in favour of Zionism would help to rally Jewish opinion throughout the world to the side of the Allies. Further, the settlement in Palestine of a Jewish population attached to Great Britain by ties of interest and sentiment might well be of value in guaranteeing the permanent security of the approaches to the Suez Canal. To these practical motives was added a genuine desire to contribute towards the solution of the Jewish problem, in which British statesmen had shown themselves sympathetically interested long before the War.

All these considerations played their part in bringing the British Govt. into closer relations with the Zionist leaders. With Sir Mark Sykes as the principal intermediary, an exchange of views began in Feb. 1917, with the result that on Nov. 2 the Foreign Secretary, Mr. Balfour, wrote to Lord Rothschild:—

Dear Lord Rothschild—I have much pleasure in conveying to you on behalf of His Majesty's Government the following declaration of sympathy with Jewish Zionist aspirations, which has been submitted to and approved by the Cabinet: "His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country." I should be grateful if you would bring this Declaration to the knowledge of the Zionist Federation.

The Balfour Declaration, as it has come to be called, was the act of Great Britain, but it was issued with the knowledge and concurrence of the Allied Powers. The French Govt. had actually anticipated the Balfour Declaration by publicly expressing its general sympathy with Zionist aims as early as June 1917. France formally associated herself with the Declaration in Feb. 1918, and Italy in the following May. As for the United States, President Wilson had personally intervened to make it clear that he would welcome a British pronouncement in favour of Zionism, and soon after the Declaration was issued, he publicly expressed his satisfaction. In 1922 resolutions associating the United States with the policy embodied in the Declaration were unanimously adopted by both Houses of Congress. At the instance of Great Britain, a Zionist delegation was given a hearing by the Peace Conference in Paris on Feb. 27 1919, but it was not until April 24 1920 that the Supreme Council of the Allies, at its meeting at San Remo, formally agreed that Palestine should be placed under a British mandate and that Great Britain should be responsible for carrying the Balfour Declaration into effect.

*British Mandate for Palestine.*—In Dec. 1920, the proposed terms of the Palestine mandate were submitted by the British Govt. to the League of Nations for confirmation by the Council. There was a succession of unforeseen delays, but a slightly modified draft was eventually approved by the Council at its meeting in London on July 24 1922. A few weeks earlier, the British Govt. had issued a statement of British policy in Palestine, in which it interpreted the Balfour Declaration as meaning, "not the imposition of a Jewish nationality upon the inhabitants of Palestine as a whole, but the further development of the existing Jewish community, in order that it may become a centre in which the Jewish people, as a whole, may take, on grounds of religion and race, an interest and a pride."

The mandate came into full operation on Sept. 29 1923. In its final form, it recites the Balfour Declaration in the preamble, and includes among its provisions various articles dealing with Jewish immigration, the settlement of Jews on State and waste lands, the use of Hebrew as one of the official languages, and the status of the Zionist Organisation, which is recognised as a public body entitled to advise and co-operate with the mandatory government in matters affecting Jewish interests. The Organisation is, at the same time, required to take steps to secure the co-operation of all Jews who are willing to associate themselves with it in the establishment of the Jewish national home. With this end in view, the Organisation has opened negotiations with representative Jewish bodies in Great Britain, the United States and elsewhere, and in 1925 the Fourteenth Zionist Congress resolved that an immediate effort should be made to build up a Jewish agency for Palestine on the broadest possible basis. When the Balfour Declaration was issued, it was acclaimed with enthusiasm in almost every part of the Jewish world, but it caused some anxiety among a minority who feared that the establishment of a Jewish national home in Palestine might impair their status as citizens of their respective countries. These fears cannot be said to have been completely dispelled, but though there are still many Jews who hesitate to call themselves Zionists, there is a growing tendency among Jews of all shades of opinion to unite in the practical work which is being done in Palestine under Zionist auspices.

## II. THE NEW RÉGIME IN PALESTINE

Although a Zionist commission was sent to Palestine, with the approval of the British Govt., in the spring of 1918, little practical work could be done until well after the close of the War. The foundation stone of the Hebrew University of Jerusalem was laid on Mount Scopus in July 1918, but the Zionist Commission was mainly pre-occupied with relief work in the liberated areas, where the Jewish settlements had suffered severely from the direct and indirect effects of the War.

*Zionism at Work.*—The return to normal conditions was marked by the San Remo decision of April 1920, which was followed by the establishment in Palestine of a civil administration in the following July. Subject to the general control of the

Government, the Zionist Organisation was now for the first time in a position to bring in immigrants and to purchase land. Between the close of the War and Sept. 30 1925, about 67,000 Jewish immigrants have entered Palestine, including 8,517 in 1921, 7,844 in 1922, 7,421 in 1923, 12,856 in 1924 and about 21,000 in the first nine months of 1925. During the same period there have been about 10,000 Jewish emigrants, of whom about two-fifths were pre-War settlers, leaving a net immigration of 57,000. The Jewish population, which was about 90,000 in 1914, was reduced during the War to about 55,000. It was found to be 84,000 at the census of Oct. 1922, was officially estimated at 108,000 in March 1925 and must have risen by the end of the year to close on 130,000 or nearly 16% of the total population.

In March 1925 the number of Jews on the land was estimated at 23,000 or 21% of the Jewish population, as compared with 15,000 or 18% in Oct. 1922. At the same date the total area of land in Jewish possession was 319 sq. m. as compared with 177 sq. m. in 1914. With the exception of about 20 sq. m. of State and waste lands, all the land acquired since the War has been bought, often at inflated prices, in the open market, and in addition to the heavy expenditure in which they have thus been involved, the Jewish National Fund and other Jewish bodies have had to sink large amounts of capital in improvements, including in particular the drainage of marshes. At the same time there has been considerable increase, which has been particularly marked since 1924, in the Jewish population of the three leading towns, Jerusalem, Jaffa and Haifa. In the neighbourhood of Jaffa, the Jews have built up the separate township of Tel Aviv, which had in Aug. 1925, a population of 34,000 as compared with 13,000 in Dec. 1922, and 2,000 in Aug. 1914. The rapid growth of the towns is connected with the industrial development of Palestine, which in turn is largely due to the influx of private Jewish capital. In March 1925, it was officially estimated that since the War 150 industrial enterprises had been established in Palestine, representing in the aggregate an investment of £1,200,000, of which more than 90% was Jewish. An important factor in the industrial and general development of Palestine is the Palestine Electric Corporation, which has been financed from Zionist and other Jewish sources and which is already supplying Jaffa with electric light and power.

**Education.**—Since the War, the Zionist Organisation has largely extended the scope of its educational work in Palestine. At the end of 1924 it controlled 132 schools of various grades, with 550 teachers and 13,000 pupils. A Jewish technical institute was opened at Haifa in Feb. 1925, and the Zionist Organisation also maintains an agricultural institute at Tel Aviv. In April 1925, Lord Balfour formally inaugurated the Hebrew University of Jerusalem, which consists at present of three research institutes, devoted respectively to chemistry, microbiology and tropical medicine and Jewish and Oriental studies. In all these institutions the language of instruction is Hebrew, which has already become the Jewish vernacular in Palestine and is the mother-tongue of the whole of the new generation. An important branch of Zionist work in Palestine is that represented by the Hadassah Medical Organisation, which at the end of 1924 maintained five hospitals and 39 clinics, five laboratories and a Röntgen Institute, with a total staff of 63 physicians and bacteriologists. In its maternity and infant welfare work, which forms an important part of its activities, the Hadassah co-operates with the Women's International Zionist Organisation.

The entire expenditure of the Zionist Organisation is defrayed by voluntary contributions from Jews in all parts of the world. On Nov. 30 1925 its total receipts since 1917 amounted to £3,000,002. During approximately the same period, the Jewish National Fund, which exists for the purchase of land in Palestine, raised independently a further £1,026,286, making a total of £4,026,288. Including the expenditure of other Jewish bodies, such as the Palestine Jewish Colonisation Association, and the investments of private individuals, the Jewish capital brought into Palestine since the War was officially estimated at the beginning of 1925 at a total of at least £6,000,000, to which about £2,000,000 must have been added in the course of the year.

Though substantial progress has thus been made, there are Zionists who consider that the pace is too slow and who divide the blame between the Zionist executive and the British Government. Disappointment on this score was expressed at the first two post-War Congresses in 1921 and 1923, and came to a head at the Fourteenth Congress in 1925, when the Zionist executive, headed by Dr. Weizmann, felt obliged to retire from office. There was, however, an immediate revulsion of feeling. Dr. Weizmann's leadership, though freely criticised, was felt to be indispensable, and his re-election by an almost unanimous vote implied acceptance of the cautious policy for which he had always stood. Caution is essential, if only in view of the presence of the Arabs, who still form more than 80% of the population of Palestine. The Arabs did not take kindly to the Balfour Declaration, which they not altogether unnaturally misconstrued, and for some time after the War there was a tense situation which might easily have become dangerous. There were anti-Jewish demonstrations in Jerusalem in 1920, and 95 Jewish and Arab lives were lost in six days' rioting in and near Jaffa in 1921. Since then, however, there has up to the present (1925) been no serious disturbance of the peace. Anti-Zionist agitation has continued, but even this has shown a tendency to die down.

**ZOBEL RAHAMA** (1830-1913), Egyptian pasha (see 28.992), died at Geili, near Khartoum, Jan. 5 1913.

**ZOOLOGY** (see 28.1022).—The scheme of classification proposed in 1910 requires but little modification except in the Vertebrata; in this group considerable advances have been made. (See DISTRIBUTION OF ANIMALS.)

The biological exploration of the continents and oceans has been carried on in all parts of the world, and the great museums have been enriched with enormous collections of both recent and extinct animals. Thus the zoological specimens in the British Museum (Natural History) increased from 1,300,000 in 1882 to 3,000,000 in 1904, and in 1926 number more than 6,000,000, of which 4,000,000 are insects. The systematist not only has to study much larger collections than formerly, but he has also to master a vastly greater literature; in addition, a more detailed and critical analysis is now expected. Thus the tendency is towards an ever-increasing specialisation. Particular attention has been paid to certain groups that directly affect man's welfare, e.g., as pests of crops or carriers of disease; thus protozoology (*q.v.*), parasitology (*q.v.*) and entomology (*q.v.*) have become independent branches. Marine biology also has made great strides, following the recognition of the fact that fishery development and fishery legislation must depend on knowledge of the conditions of life in the sea. Other branches that have attracted many workers in recent years are the experimental study of heredity (*q.v.*) and variation, cytology (*q.v.*) the physiology of development and animal behaviour.

The specialisation which is so characteristic of modern zoology cannot be avoided, but makes it difficult for a worker to keep in touch with the results obtained in other fields, and is partly responsible for the output of hypotheses without application.

#### CLASSIFICATION OF VERTEBRATA

New methods, such as the study of the microscopic structure of scales and of teeth, have revealed unexpected relationships; the more detailed study of anatomy and the discovery of a multitude of extinct types hitherto unknown have made the lines of evolution more certain, but have shown that parallelism and convergence are much more widespread than had been supposed; as a result classification is more complex, and there is an increasing tendency to subdivision.

Sir Ray Lankester recognised (*see* 28.1022) five classes of craniate vertebrates, but was careful to say that the classification was that of the specialist contributors and did not always express his own views; elsewhere he has left us in no doubt as to his opinion that the Marsipobranchii (or Cyclostomata) form a class apart, and may be regarded as constituting a separate branch, the Monorhina, opposed to the remaining classes, which may be collectively termed Diplorhina. For some years the Selachians have been recognised as a class distinct from the bony fishes, since the differences between them are more fundamental than those that separate the bony fishes from the Batrachians. The arrangement of the Diplorhina in five classes only is wanting in balance; it would be more reasonable to place all the four-footed vertebrates in one class than to treat the fishes in this way. If we wished to emphasise the principal evolutionary steps we should divide the Diplorhina into two main groups, Selachians and Bony Vertebrates, and the latter again into two, Pisces and Tetrapoda. The acquisition of a bony exoskeleton, including dentigerous premaxillaries and maxillaries forming a secondary upper jaw, paired frontal and parietal bones, etc., and the development of an air-bladder or lung, distinguish the Pisces from the Selachians and indicate their affinity to the Tetrapoda, which originated from the Pisces by the transformation of the paired fins into pentadactyle limbs.

Recent detailed work on the palaeozoic fish-like vertebrates by Kiaer and Stensio has cleared up their relationships, so that the systematic position of *Palaeospondylus* alone remains in doubt. The Anaspidæ and Cephalaspidæ are Monorhina, the Arthrodira and Antiarcha may either be included in the Selachii, the definition of which would then have to be modified, or may constitute a class apart, and the Heterostraci, as the only Diplorhina with gill-pouches, may also rank as a class. Thus nine classes of Craniate Vertebrates may be recognised, namely Monorhina, Heterostraci, Selachii, Placodermi, Pisces, Batrachia, Reptilia, Aves and Mammalia.

*Monorhina*.—The most important recent contribution to our knowledge of this group is that of Kiaer (1924), who made an elaborate study of the Silurian and Devonian Anaspidæ and has shown that these, and also the Cephalaspidæ, agree with the modern lampreys and hagfishes in having an unpaired nostril, and in the form and number of the branchial openings (*see* fig. 1).

FIG. 1.—Upper view of head of *Petromyzon*. (a) compared with that of *Rhyncolepsis* (b). In both, the pineal organ is seen between the eyes, and the unpaired nostril in front of it. (From Kiaer, *Vidensk. Skrift.*, Kristiania, 1924).

The similarity of the microscopic structure of the bony armour of the Cephalaspidæ to that of the diplorhinal Antiarcha and Arthrodira is an extraordinary example of convergence.

Kiaer's researches give a new conception of the antiquity and diversity of the Monorhina. In the Anaspidæ the mouth was a terminal fissure with a distinct lateral cleft, and it may be inferred that the rounded mouth and the toothed protrusible tongue of the modern Cyclostomes are specialised features peculiar to them. Both the Anaspidæ and Cephalaspidæ had a complete

exoskeleton of plates and scales, and the differences between them may be in great part due to the fact that the former were free-swimming, whereas the latter lived on the bottom; they parallel the differences between the sharks and the rays. It is probable that the Anaspidæ had no jaws homologous with those of the higher vertebrates; but some of them had the mouth margined above and below with paired plates, which must have functioned as jaws.

*Selachii*.—The Selachians (Regan, 1906) may be defined as follows: Craniate vertebrates with gills supported by visceral arches, one pair of which is modified into jaws. Nasal organs paired blind sacs; exoskeleton of dermal denticles, which are typically similar in structure to teeth; no dermal bones; endoskeleton cartilaginous; no air-bladder or lungs; fins with several layers of horny rays on each side; vertebral column with neural and haemal arches and intermuscular ribs; no supra-neural or infra-haemal arches.

Of the five sub-classes the palaeozoic Pleuropterygii and Acanthodii are more primitive than the rest in having no mixopterygia; the presence of these intromittent organs, which are paired appendages of the pelvic fins, indicates the derivation of the Ichthyotomi, Euselachii and Holocephali from a common stock. In the Holocephali the upper jaw is fused with the skull, but the hyoid arch has the same number of elements as the succeeding branchial arches, including a pharyngo-hyal; this primitive condition is a clear indication that in the common ancestor of the three sub-classes in which mixopterygia are developed the hyoid arch was not modified for the suspension of the jaws, and consequently that the condition in the Euselachii, in which the pharyngo-hyal has been lost and the hyomandibular (epi-hyal) articulates with the skull and supports the jaws, has been acquired independently and does not indicate relationship to the Pisces. Some authorities have expressed the view that the old division of the Euselachii into sharks and rays is unnatural, and have tried to improve upon it by a classification based upon supposed differences in the calcification of the vertebral centra; but a detailed anatomical study has revealed that the sharks and rays are well defined and natural divisions, and that the only group in which the structure of the centra is distinctive is the Galeoidea, in which there are four uncalcified areas radiating to the bases of the arches.

*Euselachii*.—The Euselachii may be classified as follows:—

Order 1. PLEUROTREMATA.—Gill openings lateral. Pectoral fins relatively narrow based; propterygial margin free. Pectoral radials typically simple and of few segments. Two halves of pectoral arch well separated above. Pterygo-quadrate attached to cranium. Hyomandibular supporting first hemibranch; ceratohyal unsegmented.

Sub-order 1. NOTIDANOIDEA. Families *Chlamydoselachidae*, *Hexanchidae*.

Sub-order 2. GALEOIDEA. Families *Odontaspidae*, *Lamnidae*, *Orectolobidae*, *Scyliorhinidae*, *Carchariidae*.

Sub-order 3. SQUALOIDEA. Families *Cochliodontidae*, *Hybodontidae*, *Heterodontidae*, *Protospinacidae*, *Pristiophoridae*, *Squalidae*, *Squatimidae*.

The position of the Petalodontidae is uncertain; they may not belong to the Euselachii.

Order 2. HYPOTREMATA.—Gill openings ventral. Pectorals broad-based; propterygial margin joined to side of body and head. Pectoral radials of many segments, distally bifurcated, extending to free edge of fin. Suprascapular cartilages united to vertebral column (Batoidea) or meeting above it (Narcobatoidea). Pterygo-quadrate not attached to cranium. Hyomandibular purely suspensory; ceratohyal of two or three segments.

Sub-order 1. NARCOBATOIDEA.—Family *Torpedinidae*.

Sub-order 2. BATOIDEA.—Families *Rhinobatidae*, *Pristidae*, *Ranidae*, *Trygonidae*, *Myliobatidae*, *Mobulidae*.

The Jurassic *Protospinax*, described by Smith Woodward (1918), appears to be ancestral to the *Pristiophoridae*, having the same relation to them that *Rhinobatus* has to *Pristis*. It is interesting to see in both the sharks and the rays the development of a long flat snout leading to a still longer projection armed with teeth on each side. The *Torpedinidae* are a good example of correlated adaptations, the development of the paired electric organs entailing considerable modifications of structure of the rostral and preorbital cartilages and of the pectoral arch. The soft

smooth skin of these electric rays contrasts with the tough spinate skin of the other members of the order; evidently their power of giving electric shocks renders other means of defence superfluous.

The fact that in all three sub-orders of the Pleurotremata the pterygo-quadrate is as a rule only loosely attached by ligament to the cranium, but that in both the Notidanoidea and Squaloidea there are families in which there is a direct postorbital articulation (Hexanchidae, Hybodontidae), and in the Squaloidea also one (Heterodontidae) with a praeorbital articulation, between pterygo-quadrate and skull, points to the conclusion that in the Euselachii the purely hyostylic condition is primitive.

**Placodermi.**—Stensio (1925) has shown that in the Arthrodira the general characters of the neurocranium and brain are shark-like, and that although bony dermal plates are developed these fishes have no relationship to the Pisces, but are independently derived from primitive sharks. A thin layer of bone wholly or partly covers the inner and outer surface of the cartilaginous cranium, but there are no dermal bones on the ventral surface of the skull. Stensio regards the Antiarcha as rather closely related to the Arthrodira.

**Pisces.**—This class must have originated in Silurian times from primitive Selachians. Dermal ossification led to the formation on the body and tail of ganoid scales, rhombic plates arranged in parallel longitudinal and oblique series, and, where flexibility was not a requirement, to the development of bones, including primarily paired nasals, frontals, parietals and supratemporals on top of the cranium and a parasphenoid below, praemaxillaries and maxillaries forming a secondary upper jaw, and on each side ectopterygoid and mesopterygoid on the primary upper jaw, dentary, angular and praecarticular sheathing the lower jaw, circumorbitals and praeperculum covering the cheek, operculum, suboperculum and branchiostegals protecting the gill-chamber, and a series of bones overlying the pectoral arch and connecting it with the skull, post-temporal, supra-cleithrum, cleithrum and clavicle.

The fin-rays are ossified and segmented and form a single series on each side of the fin; these dermal rays have exactly the same relation to the muscles and the endoskeletal supports as the horny rays of the Selachians, and should be considered as homologous with them. Ossification also extended in some degree to the endoskeleton, for all bony fishes have a certain number of cartilage bones that must have been developed in their common ancestor, e.g., articular, quadrate, metapterygoid. In addition to the ossified skeleton, the development of an air-bladder, or lung, the reduction of the interbranchial septa, etc., there is another very important feature that distinguishes the Pisces from the Selachii, namely the structure of the vertebral column, the Pisces having not only neural and haemal arches, but supra-neural and infra-haemal arches as well; the last named are represented in the praecaual region by pleural ribs. The typical structure may be obscured by union or loss of some of the elements, but it is well seen in the Sturgeons and Dipnoans.

**Structure of Scales.**—The work of Goodrich (1908) on the microscopic structure of the scales is of considerable importance in elucidating the relationships of the main divisions of the class Pisces. It is generally recognised that the primitive scales were thick rhombic juxtaposed bony plates—usually termed ganoid scales—and that thin rounded overlapping scales are more specialised. Goodrich has shown that the ganoid scales belong to three very distinct types. The first, found in the Palaeoniscidae and Polypterus, consists of parallel layers of ganoin, a glassy homogeneous substance, near the surface and of bone within, separated by cosmine, a vascular layer with bunches of minute tubules arising from the outer channels. The second, found in *Lepidosteus*, *Lepidotus*, *Pholidophorus*, etc., differs in that there is no layer of cosmine separating the layers of ganoin and bone.

The third type of scale, found in the Rhipidistia and Dipneusti, resembles the first, except that the cosmine has a very specialised and definite structure and is covered by only a thin layer of ganoin; whereas in scales of the first and second types growth is accompanied by the formation of successive layers of ganoin,

in those of the third type the ganoin increases in area, but not much in thickness. The relationship of *Polypterus* to the Palaeoniscidae, first indicated by Goodrich, becomes apparent when its other characters are studied; for example, Budgett's researches on the development have shown that the pectoral fin is derived from the Palaeoniscid type; of great interest is the presence in *Polypterus* of an air-bladder which in structure, position and vascular supply is more primitive than that of any other fish. The close relationship of the Rhipidistia and Dipneusti was maintained by Dollo and his views are confirmed by Goodrich; from the work of Stensio (1923) it is clear that the Actinistia also are very near the Rhipidistia. We propose then to recognise only three sub-classes of the class Pisces, corresponding to the three types of scale-structure described by Goodrich, and to classify the Pisces as follows:—

Sub-class 1. PALAEOPTERYGII.—Scales, when ganoid, with a cosmine layer covered by several layers of ganoin. Dorsal and anal fins (except the dorsal of *Polypterus*) with dermal rays paired, more numerous than and not definitely articulated with their endoskeletal supports.

Orders *Archistia*, *Selachostomi*, *Belonorhynchii*, *Cladistia*.

Sub-class 2. NEOPTERYGII.—Scales without cosmine layer. Dorsal and anal fins with dermal rays united to form a median series of rays, each of which has its own endoskeletal support and forms a definite articulation with it.

Orders *Protospondyli*, *Ginglymodi*, *Halecostomi*, *Isospondyli*, *Haplomi*, *Niomini*, *Lyomeri*, *Ostariophysi*, *Apodes*, *Heteromi*, *Synognathi*, *Microcyprini*, *Salmopercae*, *Anacanthini*, *Allotriognathi*, *Solenichthyes*, *Berycomorphi*, *Zeomorphi*, *Percomorphi*, *Scleroparei*, *Hypostomides*, *Heterosomata*, *Discocephali*, *Plectognathi*, *Xenopterygii*, *Haplodoci*, *Pediculati*, *Opisthomi*, *Symbranchii*.

Sub-class 3. CROSSOPTERYGII.—Scales, when ganoid, with a cosmine layer covered by a single layer of ganoin.

Orders *Rhipidistia*, *Dipneusti*, *Actinistia*.

**Palaeoniscoids.**—The Archistia (Palaeoniscoids) are in many respects the most generalised members of the class Pisces. The earliest fishes of this group were the Palaeoniscidae, swift-swimming predaceous fishes, with fins like those of the modern Polyodontidae of the order Selachostomi. In these the long based pelvic fins are essentially similar in structure to the dorsal and anal, being supported by a series of pterygiophores, segmented into two principal pieces, basals and radials, the latter contained in the well-developed muscular lobe at the base of the fin; some of the anterior basals may be united to form a pelvis. The pectoral fins are somewhat more specialised, the anterior basals forming a coracoscaphular cartilage which is firmly rooted by dorsal and ventral outgrowths, the posterior forming a metapterygium. The primitive structure of the paired fins in the Palaeoniscidae and Polyodontidae makes it impossible to derive the Palaeopterygii from any known group of fishes except the Pleuropterygian sharks. The relationship of the Belonorhynchii to the Palaeoniscoids and Sturgeons has been insisted on by Stensio in his valuable account of the fishes of this order.

**Neopterygii.**—The sub-class Neopterygii includes most living fishes and its classification is a difficult matter; the different orders have been dealt with in a series of papers (Regan, 1902-25), and only a general sketch is necessary here. The Protospondyli, represented in the living fauna by *Amia*, began in the upper Permian with the Semionotidae, probably derived from the Palaeoniscidae; these were small-mouthed slow-swimming fishes feeding at the bottom on small invertebrates and many of their differences from the Palaeoniscidae may be interpreted as related to their different habits.

The Ginglymodi (*Lepidosteus*) and Halecostomi (Pholidopteridae, Oligopleuridae) are offshoots of the Protospondyli. In these three orders the hypurals supporting the upper lobe of the caudal fin are attached to the upturned end of the vertebrae column. The Halecostomi are distinguished by their mouth structure, the jaws being delicate and feebly toothed and the praemaxillaries small and loosely attached, whereas in the Protospondyli and Ginglymodi the praemaxillaries are strong fixed bones that extend backwards to join the frontals and are perforated for the olfactory nerves. The Halecostomi are herring-like fishes, and were evidently plankton-feeders like the herrings, whose place they occupied in Triassic and Jurassic times. At the

end of the Jurassic they gave rise to the earliest Isospondyli, fishes almost identical with the modern Elopidae, larger and more active swimmers than the Halecostomi, with a more widely forked caudal fin, the upper lobe of which is supported by hypurals attached to a few paired bones—uroneurals—probably enlarged and displaced neural arches of posterior vertebrae, the centra of which have aborted; this caudal structure is characteristic of the remaining orders. The Isospondyli are physostomous, *i.e.*, the air-bladder has a pneumatic duct; of other fishes that agree with them in this respect it is easy to separate off the Ostariophysi, in which certain elements of the anterior vertebrae form a chain of ossicles connecting the air-bladder with the ear; and the apodes, or eels, in which the praemaxillaries are fused with the mesethmoid.

But the limits and contents of the order Isospondyli are a difficult question. In the Clupeoids, which include the Elopidae, the vertebral column is primitive, the parapophyses, or at least those of the anterior vertebrae, being separate bones wedged into pits in the centra; the Salmonoids and Stomioids agree with them in this, but the more specialised families of both these groups have lost the mesocoracoid, which was formerly considered diagnostic. Other fishes that have retained the mesocoracoid (Osteoglossoids, Mormyroids, etc.) have strong parapophyses ankylosed to the centra; these are provisionally classed in the Isospondyli, but should perhaps be separated as orders. The Haplomi (Esocidae, Umbridae, Dalliidae) differ from the Clupeoids in the loss of the mesocoracoid and in having the mesethmoid replaced by a pair of large dermal bones. The Iniomi (Scopeloids) are a large and varied group, the most primitive members of which are near the Elopidae, but differ in that the praemaxillaries exclude the maxillaries from the oral border, the parapophyses are not autogenous, and the mesocoracoid is absent. The Lyomeri (*Saccopharynx*, *Gastrostomus*) are perhaps an offshoot from the Iniomi.

Of the physoclastic orders the first seven (Heteromi to Solenichthyes) are isolated groups that may have evolved independently from the Isospondyli or Iniomi; they agree in that the pelvic fins are formed of articulated rays and are abdominal in position, or if thoracic (Anacanthini, Allotriognathi) the pelvic bones are not directly attached to the cleithra. Jungersen (1908) has made a valuable contribution to our knowledge of the osteology and classification of the Solenichthyes. The Berycomorphi, which were abundant in Cretaceous seas, are evidently derived from clupeoid Isospondyli; in this group we see acquired features that are characteristic of the remaining orders, the anterior dorsal and anal rays and the outermost pelvic ray modified into spines and the pelvic bones directly attached to the cleithra. The Zeomorphi are related to the Berycomorphi, from which the Percomorphi also are derived; these are unknown before the basal Eocene; they differ from the Berycomorphi in the loss of orbitosphenoid, the reduction in number of the pelvic rays (never more than six), etc.; they are the dominant benthic fishes in the coastal waters of tropical and warm temperate seas and have branched out in all directions, giving rise to a number of more specialised groups, some of which, *e.g.*, Gobioids, Blennioids, are provisionally retained within the order, whereas ten others are given ordinal rank, including the Scleroparei, or mail-cheeked fishes; the Heterosomata, or Flat-fishes; the Discocephali, or sucker-fishes; and the Pediculati, or angler-fishes. The position of the Hypostomides is somewhat uncertain, but Jungersen (1914) regards them as related to the Scleroparei.

**Special Orders.**—Some zoologists may be surprised at the large number of orders of the sub-class Neopterygii, if they have not realised that this group is much larger and more varied than either of the classes Aves or Mammalia. Attention may be called to three orders in which discoveries of special interest have been made, namely Microcyprini, Allotriognathi and Pediculati. The Microcyprini include the Cyprinodonts, a group of small brackish and fresh-water fishes that includes both oviparous and viviparous forms; in most of the oviparous species there are marked differences between the sexes, and in some of them court-

ship and pairing have been observed; viviparity has arisen independently three or four times in tropical America, accompanied by quite different modifications of the anal fin of the males for purposes of internal fertilisation; but in the viviparous Phallostethinae of Johore the uro-genital openings are remote from the anal fin, and the males are provided with a priapium, an extraor-

FIG. 2.—Fluctuation in average number of spinous rays in dorsal fin of *Zoarces viviparus* in successive year classes (excluding 1916) of two separate populations (after J. Schmidt).

dinary intromittent organ placed beneath the head and chest, with a special skeleton, muscles, glands and external appendages of its own, and involving remarkable modifications of the cleithra and of the anterior vertebrae and ribs for its attachment.

The Allotriognathi, a small but isolated and particularly well defined group of oceanic fishes, are noteworthy for the difference in form and structure between the most generalised and the most specialised members of the order, the deep-bodied *Lampris* and the eel-shaped *Stylophorus*. In *Stylophorus* the eyes are telescopic that is to say they are large, cylindrical, placed close together and directed forwards; it may be inferred that *Stylophorus* uses binocular vision to find food; this would be captured by the sudden protrusion of the small toothless mouth, which is extraordinarily protractile. The very long lower jaw is articulated far behind the head, and by a downward movement of its anterior end pulls the upper jaw away from the head so that the mouth appears at the end of a long membranous pouch. The most interesting feature is that this protraction of the mouth would be downward, not forward, the direction in which the eyes have sighted something to be caught, were it not accompanied by an upward movement of the head, produced by the contraction of the muscles attached to the top of the skull; thus *Stylophorus* loses sight of its prey in the act of catching it. In the Pediculati, or angler-fishes, the first ray of the dorsal fin is placed on top of the head and is modified into a line and bait; there are three sub-orders, of which the Ceratioids are inhabitants of the middle depths of the ocean, from about 500 to 1,500 metres below the surface; they are uniformly pigmented and their bait is a luminous lure.

It has been discovered that in the Ceratioids the males are dwarfed and parasitic on the females, to which they are attached by outgrowths of the snout and tongue that unite with the skin

of the female in such a way that it is impossible to say where the one fish begins and the other ends (see fig. 3); the blood systems of the two fishes appear to be continuous, and it seems that the male must receive nutriment from the blood of the female, as the small toothless mouth is closed in front and the alimentary

FIG. 3.—*Edriolychnus schmidti*, male, attached to inner face of praeperculum of female. Four times natural size. (From *Proc. Roy. Soc.*, (B), 97, 1925).

canal is vestigial. The evolution of males of this kind becomes intelligible when we consider that the Ceratioids are solitary, slow-swimming fishes that live in darkness and are necessarily few in number in comparison with the more active fishes on which they prey; in such circumstances the difficulty experienced by mature fishes in finding a mate may have led the males to form the habit of seeking for females as soon as they are hatched, when they are relatively numerous, and if they find one becoming attached to her.

*Crossopterygii*.—The Rhipidistia, which flourished in Devonian and Carboniferous times, are the most generalised order of the sub-class Crossopterygii; in the structure of the pectoral fins they are more specialised than the Archistia, none of the radials articulating with the pectoral arch and the segmented metapterygium projecting outwards, so that the lobe of the fin tends to separate from the body and to become narrow based; the pelvic fins appear to have been somewhat similar. The scales may easily have been derived from the Palaeoniscid type by reduction of the ganoine and specialisation of the cosmine. The Dipneusti, distinguished by fusion of the pterygo-quadrates with the skull and the reduction of the hyomandibular, doubtless originated from unknown early Devonian or pre-Devonian Rhipidistia; they are the only order of the sub-class with living representatives. The Actinistia (Devonian to Cretaceous) appear to be highly specialised Rhipidistia in which the lobes of the paired fins are shortened, the pectorals having about four radiating radials (one probably representing the metapterygium) that articulate directly with the pectoral arch; the hyomandibular (epi-hyal) is small and does not support the jaws (*cf.* Stensio). The skeleton of the head of the Rhipidistia is almost identical with that of the earliest Batrachians, and the pectoral fins are of a type that might easily have been transformed into pentadactyle limbs; the origin of the Batrachia from fishes of this order seems certain.

*Batrachia*.—Watson (1919) has made a detailed investigation of the structure of the Stegocephalia, from which he removes the Phyllospodii (Branchiosauria) and Lepospondyli (Microsauria) as separate orders, and for the remainder uses the name Labyrinthodonta in an extended sense.

*Labyrinthodonts*.—There is a complete gradation of structure between the rachitinous and stereospondylous forms, which merely mark evolutionary stages. Watson's classification of the Labyrinthodonta is as follows:—

#### Order LABYRINTHODONTA.

Grade 1. EMBOLOMERI. Families *Anthracosauridae*, *Loxommidae*, *Cricotidae*, etc.

Grade 2. RACHITOMI. Families *Eryopidae*, *Rhinesuchidae*, *Disorophidae*, *Trematopsidae*, *Micropholidae*, etc.

Grade 3. STEREOSPONDYLI. Families *Capitosauridae*, *Trematosauridae*, *Brachynipidae*, etc.

It has long been recognised that the current classification of the frogs and toads is unsatisfactory, but great progress towards a more natural arrangement has been made by Noble, who has followed up the work of Nicholls (1916) by a more extended

investigation of the structure of the vertebral column, and has tested his results by detailed research on the thigh musculature. Noble's classification is as follows:—

#### Order SALIENTIA (Ecaudata).

Sub-order 1. OPISTHOCELA. Families *Discoglossidae*, *Pipidae*.

Sub-order 2. ANOMOCOELA. Family *Pelobatidae*.

Sub-order 3. PROCOELA. Families *Bufo* *and* *Bufonidae*, *Hylidae*, *Brachycephalidae*.

Sub-order 4. DIPLASIOCELA. Families *Ranidae*, *Brevicipitidae*.

This scheme is perhaps not final, and the reduction in number of families which has followed the discovery that the characters supposed to be diagnostic were of little value may be replaced by an increase in number when further work clears up the relationships of the genera and enables natural groups to be defined. The *Bufo* *and* *Bufonidae*, for example, appear to be a somewhat heterogeneous assemblage.

*Reptilia*.—In recent times our knowledge of extinct reptiles has been greatly advanced by a number of workers, especially Broom, Case, Williston and Watson; as a result many modifications of the classification have been proposed. There seems to be general agreement that the primary divisions should be termed sub-classes rather than orders, but none as to their number. The proposal to recognise only four or five sub-classes according to the number and position of the temporal vacuities has received considerable support, but appears to be open to the objections that apply to most classifications based on modifications of a single character—objections that are strengthened by the probability that the temporal vacuities are related to the jaw muscles in such a way that they either give exit to them upon the top of the skull or afford room for them at the sides (Gregory and Adams). We prefer for the present to retain the nine principal groups defined in 1910 (*see* 23.142), adding to them a tenth, the *Cotylosauria*, formed by the removal from the *Anomodontia* of those primitive reptiles in which the temporal region of the skull is completely roofed over.

In the following scheme of classification of the Reptilia only those orders are included whose position seems assured; a comparison of the recent classifications of Watson (1917) and Williston (1925) will show that there is some difference of opinion as to the groups that should be given ordinal rank and as to the relationships of many incompletely known extinct forms.

#### CLASS REPTILIA

Sub-class 1. *COTYLOSAURIA*.

Orders *Seymouriamorpha*, *Diadectomorpha*, *Captorhinomorpha*.

Sub-class 2. *ANOMODONTIA*.

Orders *Pelycosauria*, *Therapsida*.

Sub-class 3. *CHELONIA*.

Orders *Pleurodira*, *Cryptodira*.

Sub-class 4. *SAUROPTERYGIA*.

Orders *Nothosauria*, *Plesiosauria*, *Placodontia*.

Sub-class 5. *ICHTHYOSAURIA*.

Sub-class 6. *SQUAMATA*.

Orders *Pythonomorpha*, *Lacertilia*, *Ophidia*.

Sub-class 7. *RHYNCHOCEPHALIA*.

Orders *Thecodontia*, *Sphenodontia*.

Sub-class 8. *CROCODYLIA*.

Orders *Eosuchia*, *Thalattosuchia*.

Sub-class 9. *DINOSAURIA*.

Orders *Theropoda*, *Sauropoda*, *Ornithopoda*, *Stegosauria*, *Ceratopsia*.

Sub-class 10. *PTEROSAURIA*.

The most important orders omitted are the *Proganosauria* and *Thalattosauria*, aquatic reptiles of uncertain relationships, but the former perhaps near the *Ichthyosauria*.

Some of the *Cotylosauria* are not easily distinguished from the contemporary *Labyrinthodonts*, and the classes *Batrachia* and *Reptilia* are no longer definable by skeletal characters. Some of the *Therapsida* approach the *Mammalia*, which are evidently derived from this group.

*Chelonians*.—The Chelonian genus *Dermochelys* was formerly isolated in a group *Atheca*, in opposition to the rest of the *Chelonina*, which were termed *Thecophora*; it is now included in the *Cryptodira*, the flattened ribs and modified vertebrae indicating its derivation from forms that possessed a carapace. Dollo pointed out that the chelonian carapace and plastron must have

originally been acquired as a protection by slow-moving terrestrial reptiles, and that in some late Cretaceous members of the group this armour was greatly reduced or was lost in relation to a pelagic life. If the descendants of such forms resorted to the coasts to breed they might have acquired a new armour not supported by the vertebrae and ribs, and if their descendants again became pelagic this also might have been reduced. He interpreted the numerous little smooth polygonal plates in the skin of the pelagic *Dermochelys* as the remnants of a secondary armour that was at one time strong and effective. In *Psephophorus* of the Oligocene and Miocene, related to *Dermochelys*, the plates were stronger than in that genus and were sculptured and Dollo considered that an Eocene genus must have existed in which they were larger and stronger than in *Psephophorus*; this has since been discovered in Eocene deposits of Nigeria and was described by C. W. Andrews as *Cosmochelys*, a leathery turtle with a strong epithelial shield with sculptured surface. It is of great interest that the soundness of Dollo's method of reasoning should have been confirmed by the discovery of this link in the chain.

*Aves*.—Little has been done since 1910 on the classification of birds, but the division of these into Ratitae and Carinatae is artificial and the grouping proposed by Pycraft (1899) is preferable. Pycraft showed that there are two types of palate, and he divided the Neornithes into two groups, the Palaeognathae (Ratitae + Tinamiformes) and the Neognathae. In the Palaeognathae the pterygoids are connected with the palatines by suture or ankylosis, in the Neognathae by means of opposed glenoid surfaces. The Tinamovs are the only modern birds with the primitive type of palate that have retained the keeled sternum.

#### MAMMALIA

The origin of the Mammalia from the Therapsid Reptiles is now generally accepted, and among these the Cynodonts make the nearest approach to the Mammals in skeletal structure. Broom (1912) has shown that in *Cynognathus* a considerable part of the articular surface for the lower jaw is formed by the squamosal, and that the posterior end of the dentary nearly takes part in the joint; there is thus no longer any difficulty in understanding how the quadrate-articular joint of reptiles has given rise to the squamosal-dentary joint of mammals. As the direct articulation of the dentary on the squamosal became more firmly established, the quadrate, articular and angular degenerated, and according to Broom might have been lost had not the attachment of the stapes to the quadrate compelled them to take on an auditory function, the quadrate becoming the incus, the articular the malleus and the angular the tympanic bone. Thus the vexed question of the homology of the mammalian auditory ossicles may be regarded as settled, palaeontology confirming the conclusions derived from embryology.

Another paper by Broom (1914) on the structure and affinities of the Multituberculata may be considered to have settled the long controversy as to the systematic position of these animals, which are definitely shown to be Prototheria and not Marsupials. The resemblances to the living Monotremes are so close that it is suggested that these are specialised and degenerate descendants of Jurassic Multituberculates.

Broom (1915, 1916) has studied the structure of the "Organ of Jacobson," and remarks:—

"Changes in habit bring about the most marked alterations in teeth, bones and many viscera, but the delicate little cartilages in the nose are so little affected that we find almost the same type of structure in forms so dissimilar as the sheep, cat, hedgehog, bat and lemur. And as the arrangement is an extremely complicated one we seem justified in assuming that the similarity indicates affinity and common origin of these types, rather than independent developments of this remarkable structure."

So far as is known at present there are two types of structure of this organ in the Mammalia, the primitive or Marsupial type, found in *Dasybus*, *Orycteropus* and Rodents; and the higher Eutherian type, found in Ungulates, Carnivores, *Lemur* and *Pro-cavia*. Broom has investigated this organ in Insectivores, and has shown that in *Macroscelides*, *Tupaia*, etc., it is formed as in

*Polyprotodon* Marsupials, whereas in *Erinaceus*, *Gymnura*, etc., it is of the higher Eutherian type. Consequently he regards the Insectivores as an artificial group, and separates from them *Tupaia* and its allies to form the order Menotyphla. Further, as *Chrysochloris* has the organ of Jacobson of the primitive type, but with peculiarities of its own, and as this genus differs widely from the Menotyphla in other characters, he places it in a separate order Chrysochloroidea. *Centetes*, which had been considered to be related to *Chrysochloris*, was found to be a true insectivore, the organ of Jacobson resembling that of *Sorex* and *Talpa*.

The general result of other studies of the Mammalia has been to increase the number of orders; for example, giving ordinal rank to the groups formerly placed together under the headings "Edentata" and "Ungulata."

Comparable in importance with Broom's investigations on the organ of Jacobson are those of Carter (1917, 1922) on the microscopic structure of the teeth, which lead him to state that the enamel pattern, in conjunction with tube penetration of the enamel, suffices to discriminate between Multituberculates, Marsupials and Placentals, and the different groups of Placentals. He has found that Marsupial teeth are characterised by tubular penetration of the enamel, and his demonstration that the teeth of *Dasyurus* and *Thylacinus* are precisely similar in structure accorded with Regan's view (1914) of the close relationship of these genera, in opposition to American authorities (Gregory, Sinclair) who thought that *Thylacinus* was allied to that puzzling group of carnivorous mammals from the Miocene of Patagonia known as Sparassodontia. Whether these are Marsupials or Creodonts is still uncertain, for although Carter found in them tubular penetration of the enamel, his later researches led him to the conclusion that enamel pattern is more important than tubular penetration in determining affinities, and the enamel pattern of the Sparassodonts is Creodont.

A suggestion put forward by Wood-Jones that *Tarsius* should be regarded as more nearly allied than any other living animal to Man, led to a discussion at a meeting of the Zoological Society (1919) when the weight of opinion was against Wood-Jones, but seemed to favour the view that *Tarsius* was more nearly related to monkeys than to lemurs. Had Carter's results (1922) been available the debate would probably have run on quite different lines. He has shown that in the teeth of Primates the enamel pattern is of two distinct types—(1) In the Catarrhines and Mascarene Lemurs (and in the Eocene lemuroids *Notharcus* and *Pelycodus*) the prisms or rods of the enamel are of a somewhat granular structure, have straight, even margins and are separated by a slight amount of interstitial substance. (2) In the Platyrrhines, *Tarsius* (and the Eocene tarsiid *Hemiacodon*), Asiatic and African lemurs the prisms have undulating margins and are separated by a considerable amount of interstitial substance.

From this it is evident that the classification of the Primates will have to be revised, and that the evolution of the Anthropoidea, or Catarrhines, from the Lemuroidea, has been to some extent paralleled by the evolution of the Platyrrhines and Tarsioids from another group of Lemurs. There are plenty of comparable examples in other groups—for instance, the evolution in South America of the Litopterna, which show many resemblances to the Perissodactyla.

*Human Descent*.—*Tarsius* is thus clearly seen to be nowhere near the line of descent of Man, whose affinities to the anthropoid Apes have been made more certain in recent years by the discovery of extinct types of man possessing ape-like features that have been lost in modern man (Smith Woodward, 1925). Of these the most notable is the Pilttdown Man, discovered in gravels of late Pliocene or early Pleistocene age at Pilttdown in Sussex, combining a typically human skull with an ape-like lower jaw and large canine teeth that interlock in the true ape fashion.

This find gave rise to a great deal of discussion, and some were ready to maintain that the skull was that of a man and the lower jaw that of an ape, and that their association was accidental; the discovery of fragments of another skull associated with another ape-like canine tooth may be considered to have disposed of this idea. The Rhodesian skull, from a cave in the Broken Hill Mine,

Rhodesia, is of unknown age; it is remarkable for the enormous brow-ridges, more prominent than in any other human skull. In spite of this ape-like feature Smith Woodward maintains that the relationships of Rhodesian Man are with the Australian race, and he compares it especially with the fossil Australian skull from Talgai in Queensland rather than with the more primitive Neanderthal Man, to which at first sight it seems to bear more resemblance (see EVOLUTION OF MAN).

**ZORN, ANDERS** (1860-1920), Swedish artist was born at Mora, Sweden, Feb. 18 1860, of a family of farmers. He began his artistic career as a water colour artist, later transferred his attention to oil painting, and made his first attempt at etching in London in 1882. He afterwards achieved distinction as a sculptor. From 1881 he travelled extensively abroad, and in 1888 settled down in Paris, where he stayed about 10 years. In 1893 he became the Swedish commissioner at the Chicago World Exhibition. Zorn is renowned for his extremely characteristic and picturesque portraits, in which, owing to his sensitive study of values, he gives proper play to light and half tones. He was not only a master of oil painting, but one of the foremost etchers of his time, attaining great effects by simple means. Zorn, whose production was particularly abundant, passed his last years in Sweden and died in his native town on Aug. 22 1920.

**ZUBATÝ, JOSEF** (1855- ), Czech philologist, studied classical, Slavonic and especially Sanskrit philology and in 1891 was appointed professor of Sanskrit and comparative philology at the Czech University of Prague. His numerous publications, which deal with the most varied aspects (etymology, grammar, phonetics and metrics) of Indo-European philology with special reference to Sanskrit and Balto-Slavonic, include: *On the Development of metrical form* (1886); *Contributions to the interpretation of Oscan inscriptions* (1886); *On the development of the Indian drama and its relation to Greek drama* (1887); *On Vedic literature* (1888); *On the Mahabharata* (1892); *On alliteration in Lettish and Lithuanian folk-songs* (1894). The above are all in Czech, but Zubatý wrote extensively in German, his most important work in this language being the etymological Lithuanian dictionary now in preparation (1926) for Streitberg's Indo-Germanic textbooks. He translated Kalidasa's dramas into Czech.

**ZULOAGA, IGNACIO** (1870- ), Spanish painter (see 28.1049), had become by 1921 the head of a definite school of Basque and Castilian painters, whose work was marked by a realistic and decorative treatment of contemporary Spanish life, con-

sciously based on Velasquez, El Greco and Goya. His art showed increasing emphasis on silhouette, simplification of form and use of broad masses of sombre colour relieved by splashes of more vivid tints. In his figure compositions a low horizon and a panoramic background were favourite devices for obtaining a decorative monumental effect. Women and the nude figure played an important part in Zuloaga's work. In his portraits, of which typical examples are "Lucienne Bréval in *Carmen*," "Cousin Candida," "The Duke of Alba" and "Countess Mathieu de Noailles," emphasis is on the type rather than the individual, and the combination of realism and simplification tends towards caricature. This also appears in his genre paintings of Spanish types, peasants, dancers, bull-fighters, priests and beggars, such as "Old Castile," "The Bottleseller" and "The Witches of San Millan." His landscapes, mainly painted round Burgos, Salamanca and Segovia, have a similar bizarre, fantastic quality. His later work includes "My Uncle Daniel and his Family" (1912), "A Cardinal" (1914), "Toreadors" (1914) and "Un Versolari" (1916). An important retrospective exhibition of his work was seen at the 1919 International Exhibition at Bilbao, and he was represented by three portraits in the 1920-1 Exhibition of Spanish Paintings at Burlington House.

See also: L. Bénédite, *Ignacio Zuloaga* (1912); Juan de la Encina, *El Arte de Ignacio Zuloaga* (1916).

**ZULULAND** (see 28.1050), has an area of 10,427 square miles. In 1921 the natives numbered 250,829; the white inhabitants 3,985. Although incorporated in Natal most of Zululand is held as native reserves. Since 1907 the country has been peaceful. European influence has modified native life, but the tribal system continues and although there is no longer an official recognised paramount chief the Zulu sense of nationality remains strong. This was shown at the indaba held in June 1925 in honour of the Prince of Wales, when 40,000 warriors assembled at Eshowe. On that occasion Solomon Dinizulu, a grandson of Cetewayo, though officially of no higher rank than other chiefs, was selected to address the Prince as the spokesman of the nation. Dinizulu, Cetewayo's son, had died in Oct. 1913. In 1905 the coast belt was opened to white planters for the cultivation of sugar cane; by 1923 some 70,000 ac. were under cane. Cotton cultivation has been taken up since 1922, in which year the Union Govt. had a survey made for a railway and harbour in Northern Zululand.

See *Official Year Book of the Union of South Africa* (Pretoria, 1925); and *The South and East African Year Book and Guide* (London, annually).

**ZÜRICH**, Switzerland (see 28.1057), a busy industrial city, with large silk manufactures and the financial centre of Switzerland, had a population of 207,161 in 1920. New quarters, with broad streets and fine buildings, have developed round the old town, and Zürich is now largely a modern city, with an admirable system of traffic control. The Pestalozzium, which contains educational exhibits and Pestalozzi's study, has been moved to a new building on the left bank of the Limmat, near the Urania bridge. A central library on the right bank, in which the libraries of the town and canton, and those of the legal, medical and natural history societies have been combined, was finished in 1916; it contains also collections of prints and engravings. The Zürich Society of Arts has thrown open the Kunsthhaus, in the Heimplatz, with collections of pictures, sculpture and engravings; and in 1919 the Landolthaus, an interesting example of a nobleman's house in the Hirschengraben, was arranged as a museum by the same society. New municipal offices have been built, and a site was chosen in 1923 on the left bank of the river for a town hall. The state archives of the town are now kept in the old Prediger Kirche in the Zähringer Platz. The Frau Munster church, near the bridge of the same name, was modernised in 1912. The university, which is noted for its medical school and for the large numbers of women students, has been moved to a site south of the city. The new buildings, finished in 1914, consist of two wings connected by a massive tower.

**ZURICH, UNIVERSITY OF** (*see* 27.769).—There are curious but instructive fluctuations in the numbers of students at this ancient university. From 1910-4 there was a steady increase in men students while the women decreased in numbers. The War brought students to the university, the highest number being 1916 in the winter of 1916-7, including 289 women students. Numbers diminished after the War but rose again to 1730 in 1924-5, the women students totalling 262. New chairs have been founded in veterinary pathology, bacteriology and hygiene, mathematics, physical chemistry, art and living Oriental languages and Islamic studies. Developments of an important nature have taken place in view of the provision of new buildings for general purposes, a central university library, clinics for diseases of the eyes, ears, nose and throat. A notable benefaction is the Julius Claus Foundation in 1919 of Fr 1,274,052 for social anthropology and racial hygiene.

**ZUYDER ZEE** (*see* 28.1049).—After numerous plans had been drafted and various bills laid before the Dutch Chamber, Dr. C. Lely, Minister for Public Works, who for decades past had been the motive force in this direction, succeeded in 1918 in securing the passage of a Bill providing for the drainage of the Zuyder Zee at the expense of the State.

The Zuyder Zee at present covers an area of about 3,570 square kilometres. When drained, there will remain a fresh-water lake covering 1,450 square kilometres. The reclaimed land, divided into four polders by the new lake (to be called Yssel Lake), and the mouths of the Amstel and the Yssel, will cover an area of almost 2,112 sq. km., or seven times the area of the County of London. Of this land, 1,950 sq. km. will consist of exceedingly fertile soil, so that the Netherlands by peaceable conquest will have added 6% to its territory. To render this drainage possible, the Zuyder Zee must be separated from the North Sea by a dike. The

construction of this dike, a stupendous work of hydraulic engineering, is to be completed in 1934. In 1918 the cost of this work was estimated by law at £5,500,000. The length of the dike will be 29.3 kilometres and the height (presumably) six metres above the water level. The top will be only two metres in width. On the inside berm, however, there will be room for a road 17 metres wide, over which a double-track railway will run. The dike will be equipped with 30 discharge sluices, each 10 metres wide and five metres deep. Further, there will be two locks, respectively 10 and six metres wide. These sluices and locks will maintain communication between the Yssel Lake and the North Sea. It is hoped that the north-western polder, covering an area of 220 sq. km., will be completed at the same time as the dike and that all four polders will be in exploitation by 1958.

In 1918, the cost of the drainage proper (cost of the dike excluded) was estimated at almost £13,000,000. A committee appointed in 1922 considered it probable that the proceeds from the sale of the land would cover all costs, assuming the value to be about £25,000 per square kilometre. Among the advantages resulting from the scheme will be the improved water discharge for the provinces which are now situated on the shores of the Zuyder Zee and the alleviation of the shortage of land, with a concomitant decrease of dependence on imports for food supply.

The drainage will exercise considerable influence on the aspect of the numerous Zuyder Zee fishing villages and small ports. Harderwyk, which in the Middle Ages was one of Holland's most important ports and one of the great Hansa towns, will be situated in the heart of the country. Assistance is to be provided by the State for that part of the population which the drainage will deprive of a means of livelihood. (*See* NETHERLANDS.)

(F. J. W. D.)

# CHRONOLOGICAL TABLE OF EVENTS

JANUARY 1 1911—JULY 31 1926

This table, intended for rapid reference, gives dates of the principal events that have happened throughout the world during the period covered by the Three New Volumes of the *ENCYCLOPÆDIA BRITANNICA*

## 1911

- JAN. 7—Diplomatic relations resumed between United States and Nicaragua (broken off in 1909).
- JAN. 11—Proclamation issued in Australia accepting Canberra as site of new Federal capital.
- JAN. 11—Francesco I. Madero, Jr., commences revolt in Mexico.
- JAN. 31—First Postal Savings Bank opened in United States.
- JAN. 9—First South American Postal Congress at Montevideo.
- JAN. 9-17—Strike of 22,000 coal miners at Liège, Belgium.
- JAN. 10—Commander Sims, U.S. Navy, reprimanded by President's instructions for stating in speech at Guildhall, London, that United States would at once and actively support British Empire against a menacing foe.
- JAN. 12—Riots in Bombay at Mohurrum celebrations. Troops fired on crowd, killing and wounding 42 persons.
- JAN. 20—Andrew Carnegie gave ten million dollars to the Carnegie Institute of Washington, D.C.
- JAN. 21—Boundary Convention signed by United Kingdom and Liberia.
- JAN. 21—Reciprocity Agreement signed by United States and Canada.
- JAN. 23—International Opium Convention signed by Germany, United States, Great Britain, France, China, Italy, Japan, Holland, Persia, Portugal, Russia and Siam.
- JAN. 25—Lord Curzon installed as Lord Rector of Glasgow University, Scotland.
- JAN. 30—The Duke of Connaught appointed Governor-General of Canada.
- JAN. 30—Eruption of Taal Volcano, Philippine Islands. About 1,300 persons killed.
- JAN. 31—J. W. Lowther elected Speaker of British House of Commons for fourth time.
- JAN. 31—Dynamite explosion in Jersey City, N.J. About 20 persons killed and much property damaged.
- FEB. 6—Ramsay MacDonald elected Chairman of British Labour Party.
- FEB. 6—Great fire in Constantinople. Nearly whole of central portion of city destroyed.
- FEB. 6—Missouri State Capitol at Jefferson City destroyed by lightning.
- FEB. 13-17—Pan-American Commercial Conference in Washington.
- FEB. 14—McCall Bill (Canadian Reciprocity) passes U.S. House of Representatives.
- FEB. 19—Russian note to China demanding commercial facilities in Mongolia.
- FEB. 24—United States ratifies new Commercial Treaty with Japan.
- FEB. 28—First direct Primary held in Chicago, resulting in nomination of Carter H. Harrison (Dem.) and C. E. Merriam (Rep.) for Mayor.
- MARCH 2—Lord Denman appointed Governor-General of Commonwealth of Australia.
- MARCH 7—Resignation of Mr. Baillinger, U.S. Secretary of the Interior.
- MARCH 7—Michelin prize of £4,000 won by Renault for flight from Paris to Puy-de-Dôme, 210 miles in 5 hours.
- MARCH 7—20,000 U.S. troops ordered to the Mexican border of Texas.
- MARCH 10—Greenwich time adopted in France.
- MARCH 11—Wales beats Ireland in International Rugby Football Match by 16 points to nil, thereby winning International Championship.
- MARCH 13—U.S. Supreme Court upholds Corporation tax.
- MARCH 15—Third reading of the Parliament Bill carried in the British House of Commons by 362 votes to 241.
- MARCH 17—Law against opium-smoking comes into force in China.
- MARCH 17—Cunard Steamship Company announces its acquisition of Thomson Line from London to Canada.
- MARCH 24—Mexican Cabinet resigns.
- MARCH 25—Great fire in New York blouse factory. 141 girls (chiefly Italian, Irish and Hungarian) killed.
- MARCH 27—Gioltitti Cabinet formed in Italy.
- MARCH 28—China accepts all Russia's demands. (See Feb. 10.)
- MARCH 28—Loss of Australian coastal steamer "Yongala" on Barrier Reef off Queensland. Crew of 70 and 68 passengers lost.
- MARCH 29—State Capitol at Albany, N.Y., partly burnt down.
- MARCH 31—Lötschberg Tunnel between Kandersteg and Rhone Valley completed.
- MARCH 31—Japan ratifies Commercial Treaty with United States.
- APRIL 1—Oxford wins University Boat Race by 2½ lengths in record time of 18 min. 20 sec.
- APRIL 3—Commercial Treaty signed between Great Britain and Japan.
- APRIL 5—Announcement that the London Observer had been acquired by W. W. Astor (now Lord Astor).
- APRIL 12—Champagne riots in France renewed.
- APRIL 13—Battle in Mexico between Government troops and rebels. U.S. troops cross border and put an end to fighting.
- APRIL 15—American, British, French and German bankers sign agreement for loan of \$50,000,000 to China.
- APRIL 19—The "Fram" (Amundsen Antarctic Expedition) arrives at Buenos Aires on return journey.
- APRIL 22—Armistice concluded by Mexican Government with rebels.
- APRIL 26—Serious floods in Buenos Aires.
- APRIL 26—Total eclipse of sun. Line of locality crossing South Pacific.
- APRIL 30—Large part of Bangor, Maine, destroyed by fire.
- MAY 1—May Day celebrations prevented in Paris by concentration of 12,000 troops.
- MAY 3—Sale of letter from Martin Luther to Emperor Charles V. for 102,000 marks at Leipzig.
- MAY 5—Ratifications exchanged of Anglo-Japanese Commercial Treaty of April 3.
- MAY 8—Opium Agreement signed at Peking between China and Great Britain.
- MAY 10—Fighting recommences in Mexico. Insurgents capture Juarez.
- MAY 12—Henry L. Slimson appointed U.S. Secretary of War.
- MAY 15—U.S. Supreme Court upholds decision for dissolution of Standard Oil Company.
- MAY 15—Peace conference at Juarez, Mexico, between Madero and the Federal Government (see May 21).
- MAY 16—Remains of Neanderthal man found in cave in Jersey, Channel Is.
- MAY 16—Queen Victoria Memorial, London, unveiled by King, in presence of Emperor and Empress of Germany.
- MAY 16—German Zeppelin "Deutschland" wrecked at Düsseldorf.
- MAY 21—General Moirier's relief force enters Fez.
- MAY 21—Madero, Mexican insurgent leader, signs a peace pact at El Paso.
- MAY 22—Opening of New York Public Library on Fifth Avenue.
- MAY 25—Resignation of Mexican President, Diaz.
- MAY 25—De la Barra inaugurated provisional President of Mexico.
- MAY 26—Committee of Imperial Defence meets in London.
- MAY 26—Védrines flies from Paris to Madrid in 12 hr. 18 min. (actual flying time).
- MAY 28—U.S. Supreme Court decrees dissolution of Tobacco Trust.
- MAY 31—Fortress blown up at Laloma, Nicaragua. 150 persons killed.
- MAY 31—"Derby" won by J. B. Joel's "Sunstar."
- JUNE 2—Imperial Conference in London passes resolution in favour of Declaration of London, Australia not voting.
- JUNE 7—Severe earthquake in Mexico City. 63 persons killed.
- JUNE 10-JULY 3—Seamen's Strike in English, Belgian and Dutch ports.
- JUNE 13—Morgan Shuster, American financial adviser, becomes Treasurer-General in Persia.
- JUNE 17—Demonstration in London of 40,000 women in favour of Woman Suffrage.
- JUNE 19—Republic proclaimed in Portugal. Recognition by United States.
- JUNE 19—Imperial Conference in London passes resolution urging uniform laws on immigration.
- JUNE 21—"Olympic" completes maiden voyage, Southampton to New York, in 5 d. 16 hr. 42 min.
- JUNE 22—Coronation of King George V. and Queen Mary.
- JUNE 26—Caillaux Cabinet formed in France.
- JULY 1—Emigration of indentured Indians to Natal, South Africa, ceases to be lawful under Emigration Act of 1910.
- JULY 1—Compulsory military service introduced in Australia.
- JULY 1—Gordon-Bennett Cup for aerial speed won by C. T. Weymann (United States).
- JULY 1—German warship "Panther" sent to Agadir to protect German interests in Morocco.
- JULY 6—Resignation of Sir Eldon Gorst, British Agent and Consul-General in Egypt.
- JULY 7—Fur Seals Convention prohibiting pelagic sealing till 1926 signed at Washington, between Gt. Britain, United States, Japan and Russia.
- JULY 10-12—Severe forest fires in Northern Ontario. 400 lives lost.
- JULY 13—Encounter between Mexican Federal Troops and followers of Madero. 40 killed.
- JULY 13—Anglo-Japanese Treaty signed, prolonging Treaty of 1905 until July 1921.
- JULY 15—Japan ratifies Treaty of June 24 with Germany.
- JULY 16—Lord Kitchener appointed British Agent and Consul-General in Egypt.
- JULY 17—Announcement that Germany had formulated demands for large territory in French Congo in return for non-interference in French action in Morocco.
- JULY 20—House of Lords passes the Parliament Bill.
- JULY 20—Bill for Reciprocity with Canada signed by U.S. President.
- JULY 20—Canadian Parliament dissolved on question of Reciprocity policy with United States.
- AUG. 1-11—Dockers strike in London.
- AUG. 3—Anglo-American and Franco-American Arbitration Treaties signed at Washington.
- AUG. 4—Metropolitan Art Museum, New York, acquires Carpaccio's picture "A Pieta" for 12,300 guineas.
- AUG. 7—International Regatta held at Spithead, England. German Emperor's "Meteor" wins International Cup for Schooners.
- AUG. 9—Wreck of S.S. "Fifeshire" off Cape Guardafui. 11 passengers and 14 of crew drowned.
- AUG. 9—Announcement of appointment of General Sir John French as chief of Imperial General Staff in Great Britain.
- AUG. 9—Temperature of 100° F. in shade at Greenwich, England—record for Great Britain.
- AUG. 9—Collision in Straits of Gibraltar between French steamer "Emir" and British steamer "Silverton." 86 lives lost in the "Emir."
- AUG. 12—U.S. Senate deletes clause in Anglo-American Arbitration Treaty giving conditional power to Commission of Inquiry to decide when arbitration is necessary.
- AUG. 14—First appropriation (£252,000) in British House of Commons for payment of members.
- AUG. 14—Russo-Japanese Agreement concerning railways in Manchuria.
- AUG. 15—Serious riots in Liverpool in connection with strikes.
- AUG. 17—Railway strike in Ireland begins.
- AUG. 17—Russo-German agreement signed regarding railways in Russian sphere of influence in Persia.
- AUG. 17-20—General Railway Strike in Gt. Britain.
- AUG. 18—Parliament Act in Great Britain receives Royal assent.
- AUG. 19—Fatal riot at Llanelli, Wales, in connection with strike. Soldiers fire on crowd. 2 deaths.
- AUG. 20—Airmen at Chicago establishes record by flying to height of 11,726 ft.
- AUG. 21—British Government agrees to appointment of Special Commission to enquire into question of railway trouble.
- AUG. 22—Discovery made at the Louvre, Paris, of theft of Leonardo da Vinci's "La Gioconda."

AUG. 24—British steamer "Foam Queen" seized by British Customs officials in belief that she was carrying men and war material to foreign revolutionists.

AUG. 24—Dr. Manuel Arriaga elected President of Portuguese Republic.

AUG. 25—Aviator A. N. Wood completes a flight from St. Louis to N.Y. City in 28 hr. and 27 min. actual flight time.

AUG. 29—Death of H. H. the Nizam of Hyderabad.

SEPT. 1—National Gallery, London, acquires Jan Gossart's "Adoration of the Kings" for £40,000.

SEPT. 2—Agreement signed between China and Japan for extension of Peking-Mukden Railway line into Mukden.

SEPT. 5—South American Company's steamer "Tucapel" wrecked between Panama and Valparaiso. 81 persons drowned.

SEPT. 5—T. W. Burgess of Rotherham, England, swims English Channel from South Foreland to Cape Gris Nez.

SEPT. 9—First aerial post in Great Britain inaugurated between Hendon and Windsor.

SEPT. 10—Great eruption of Mt. Etna.

SEPT. 12—Portuguese Republic recognised by Great Britain, Germany, Austria-Hungary, Italy and Spain.

SEPT. 11—Trials commenced in Madras High Court of 14 Indians accused of complicity in murder of Mr. Ashe.

SEPT. 14—Lord Rosebery installed as Lord Rector of St. Andrew's University, Scotland.

SEPT. 15—Russian Premier, M. Stolypin, fatally wounded by anarchist at Kiev.

SEPT. 21—General Election in Canada. Sweeping victory of Conservatives and defeat of Reciprocity policy with United States.

SEPT. 21—Death of Arabi Pasha, leader of Egyptian revolution, 1882-2.

SEPT. 23—Great Anti-Home Rule Demonstration in Belfast, Ireland.

SEPT. 25—Explosion on French battleship "Liberte" in Toulon harbour. 226 deaths on various ships.

SEPT. 26—Suspension of payment by Bank of Egypt.

SEPT. 27—Italy presents ultimatum to Turkey stating that Tripoli will be immediately occupied by Italian troops.

SEPT. 29—Italy declares war on Turkey.

SEPT. 30—Towns of Austen and Costello, Pa., destroyed by bursting of dam. 150 lives lost.

OCT. 1—Coalition of Social Democratic Federation and other British Socialist groups, forming "British Socialist Party."

OCT. 1—General Madero elected President of Mexican Republic.

OCT. 4—End of railway strike in Ireland.

OCT. 5—Tripoli occupied by Italian troops.

OCT. 10—R. L. Borden becomes Prime Minister of Canada.

OCT. 10—Chinese rebellion against Manchū dynasty begins.

OCT. 11—Inauguration of Ontario Hydro-Electric Power Transmission system.

OCT. 12—Gustav Hamel flies across English Channel from Hardelet to Maidstone.

OCT. 20—Report of Railway Commission in Great Britain issued.

OCT. 21—Archduke Charles Francis Joseph of Austria married to Princess Zita of Parma.

OCT. 23—Winston Churchill becomes First Lord of the Admiralty in Gt. Britain.

OCT. 22—Opening of National Assembly in China.

OCT. 26—Failure of Turkish attack on Tripoli. Counter-attack by Italians.

OCT. 26—Proceedings begun by U.S. Attorney-General for dissolution of Steel Corporation.

OCT. 28—Dr. Bourne, Archbishop of Westminster, makes a Cardinal.

OCT. 28—Earl of Minto elected Lord Rector of Edinburgh University; Mr. Birrell elected Lord Rector of Glasgow University.

OCT. 29—Edict issued from Throne in Peking, apologising for past neglect and granting immediate Constitution and free pardon to rebels.

NOV. 2—Largest fleet ever assembled in U.S. waters reviewed by President Taft in the Hudson.

NOV. 2—British Antarctic Expedition under Captain Scott starts for South Pole from McMurdo Sound, Ross Island.

NOV. 4—Two treaties signed between France and Germany regarding Morocco and respective possessions in Africa.

NOV. 5—Tripolitania and Cyrenaica formally annexed to Italy.

NOV. 7—Nobel Prizes for Chemistry and Literature awarded respectively to Madame Curie and Mr. Maurice Maeterlinck.

NOV. 8—A. J. Balfour resigns from leadership of British Unionist Party.

NOV. 9—Republic proclaimed at Canton, China.

NOV. 10—Great massacre by Manchus at Nanking.

NOV. 10—Prince Arthur of Connaught, Archbishop of Canterbury, Lord Chancellor, and Lord President of the Council nominated by King of England to be Counsellors of State to transact business during His Majesty's visit to India.

NOV. 11—King and Queen of England leave London for India.

NOV. 12—Ultimatum presented to Persia by Russia demanding withdrawal of Treasury gendarmes from property of Ex-Shah, and apology from Foreign Minister. Persia complied Nov. 23.

NOV. 13—A. Bonar Law elected leader of British Unionist Party.

NOV. 16—Diplomatic relations between Persia and Russia broken off.

NOV. 25—Russian troops concentrating on Persia ordered not to advance for present beyond Resht, in province of Gilan.

NOV. 25—Russia sends circular note to Japan regarding neutrality of Dardanelles.

NOV. 26—French Government issues decree regulating air traffic in France.

NOV. 27—German cruiser "Berlin" (sent to relieve "Panther" at Agadir) withdrawn.

NOV. 29—Russia sends new ultimatum to Persia demanding dismissal of Morgan Shuster, Treasurer-General.

NOV. 29—Announcement of Great Britain's assent to Franco-German Treaty regarding Morocco.

DEC. 1—Persia refuses to comply with Russia's demands. Russian troops ordered to advance into interior from Resht.

DEC. 3—International Opium Conference opened at The Hague.

DEC. 2—King and Queen of England arrive at Bombay.

DEC. 5—Brothers J. B. and J. J. McNamara sentenced in United States to imprisonment for life and for 15 years respectively, for dynamite outrages at Los Angeles.

# INDEX

## VOLUME 32

### PREFATORY NOTE

THE Index of the Thirteenth Edition of *The Encyclopædia Britannica* is divided into two parts. The first part contains all the references to information in Volumes 1 to 28, and was prepared by Miss Janet E. Hogarth (later Mrs. Courtney) and J. Malcolm Mitchell; it occupies pages 3 to 878 in this volume. The second part of the Index contains all the references to the information in Volumes 29 to 31, covering the recent years 1910 to 1926. This part was prepared under the direction of Miss D. C. Borton; it occupies pages 879 to 921. As this latter portion will probably be used to a much greater extent than its size would indicate, it has been thumb indexed so that the user of the volume may find it the more readily. Special attention may be called here also to the Classification of Articles, which will be referred to again at the end of this note.

The aim of the Index is two-fold: in the first place it seeks to distribute under a larger number of headings, and therefore to render more available, the information which the editors have distributed under the 45,000 articles in the preceding thirty-one volumes. The measure of success attained in this distribution may be estimated by the fact that the headings in this volume total 550,000, and every one is, as it were, the skeleton of an encyclopaedic article. In the second place, the Index groups under each of the 45,000 headings of articles all other important references to the same subject found in other articles. In the latter instances, *the first reference given is to the article itself* and the type used for the heading is the large black-faced type. References to the same subject from other articles naturally follow in proportion to the amount of detail contained in each article. The absence of additional references in the Index does not imply that information on the subject is not to be found elsewhere in the *Encyclopædia*, but merely that it is so fully dealt with in the article itself that other references would add no substantial information.

It is a moot point how far an index should itself convey information. Is every individual, for example, to have a date and a description attached to his name? If he has, he will occupy two lines instead of one. If he has not, he may be confused with another person of the same name, or with a place or thing. To obviate this, Christian names or initials are given wherever possible, and in their absence a short description, e.g., "author," "painter," "vizier."

Geographical references may be recognised as such by the fact that every town name is followed by an abbreviation indicating the country in which the town is situated, while physical features, such as lakes, rivers, mountains, are so described. The very numerous maps that appear in all the volumes have also been indexed throughout. These map references are readily distinguishable by the addition, after the volume and page reference, of a letter and a number in brackets, indicating the exact location on the map, e.g., Versailles, Fr. 10-778 (A6). The Index is, therefore, not only an index but also a gazetteer.

A useful feature has been added to this Index Volume for the use of those desiring to study any one of the various provinces of knowledge as a whole. After the conclusion of the Index, there will be found a Classification of Articles According to Subject, in which the various article headings in the *Encyclopædia* are re-grouped according to their subjects; for example, all the headings in Art, History, Sport and Engineering, are brought together and these in turn subdivided into their natural sections—thus, Art into Painting, Sculpture, Music, Architecture. The student of Art, History, Sport or Engineering can, in this way, see at once the headings of all the articles contained in the *Encyclopædia* on any particular subject and can select those which he may wish to read. In all cases the biographical articles will be found grouped together under their proper subject headings; that is, all painters, musicians and architects under Art.

The Classification of Articles, like the Index, is divided into two sections—one including the articles in Volumes 1 to 28; the other, those in Volumes 29 to 31. The latter section affords a full and graphic outline of the world of to-day: the events of the astounding years 1910-26; the changes brought about by the World War; the wonderful advances in knowledge, invention and human relations. A fuller account of the system adopted in framing the Classification of Articles will be found at the beginning of the Classification itself. (See page 923.)

At the end of this volume is appended a complete alphabetical list of the contributors of all signed articles, together with the headings of the principal articles written by them. This, like the Index and the Classification of Articles, is divided into two sections—one containing the list of those contributing to Volumes 1 to 28; the other those contributing to Volumes 29 to 31. This list supplements the special lists prefixed to the several volumes, where biographical information about the contributors is given.

LONDON

September 1, 1926

# RULES AND ABBREVIATIONS

**I. Type.**—Headings printed in bold Clarendon type, (e.g. **ALEPPO**) represent article headings in the *Encyclopædia*, and the first reference under every such heading is to the article in question.

All references show (1) the volume in bold Clarendon figures; (2) the page in light face type; (3) the exact quarter of the page by means of the letters a, b, c, d, signifying respectively the upper and lower halves of the first and second columns, e.g. A (letter) 1-1a. In geographical references these letters are replaced by an indication of the map square in the usual form, e.g. "(B4)."

A rule or dash (—) denotes the repetition of the preceding heading, or of its first separate word. Hyphenated words are treated as single words. Headings in italic type denote books, newspapers, or periodicals. Quotation marks are used for pictures, ships, statues, race horses and separate poems or musical compositions.

**II. Alphabetization.**—All titles, whether consisting of a single word or of more than one, and if of more, whether hyphenated or not, are treated for the purpose of alphabetization as single complete headings. In the majority of cases the same rule applies to inverted headings. Surnames followed by Christian names and geographical headings like "Wycombe, High" are exceptions. An epithet or phrase in parentheses is not treated

as part of the heading for alphabetical purposes except in a series of identical headings (see Preface, p. vii.).

Where the same name denotes human beings, places and objects, the order is (1) persons, (2) places, (3) things.

The prefixes "Mc" and "M'" are alphabetized as "Mac"; "St" is treated as "Saint," "S.S." as "Saints."

**III. Geographical Headings.**—The names of towns and villages are followed by the abbreviation for the country to which they belong. For this purpose English counties and the states of the United States rank as countries. All other topographical headings are described as "riv.," "mt.," &c. In cases like "Big Mountain," "Big River," denoting physical features the arrangement is

Big, mt.

—, riv.

Such a heading as "Big Mountain, Utah" would therefore denote a town, not a mountain. In the names of American counties, e.g. Madison Co., the word Co. is treated as part of the heading.

**IV. Abbreviations.**—The following list includes general contractions adopted for the purpose of this Index. The contractions usual in special branches of knowledge are included in the Index itself and in the article Abbreviation (vol. i. page 27).
